

Handling Exceptions Exercise Solution

```
1. def div(numerator , denominator):
2.     try:
3.         result = numerator / denominator  ## Edit this part in the function
4.     except:
5.         result = "Can't divide by zero, Please enter another number"
6.     return result
7.
8.
9. ## DON'T Change anything here. This is just for testing.
10. res_1 = div(24 , 3)
11. print(res_1)
12.
13. res_2 = div(24 , 0)
14. print(res_2)
```
