COMMANDS: 001 J3D - VIEW

J3D - VIEW

00:00

J3D, what this command will do is it will send your floor joist to the model layout and set it in 3D.

To have this command to work you have to have your joist set out and to see the visual of what your actual build of your joist are, to have them in the panels.

When you type in your command J3D, it will ask you to select the joist that you want, or if you enter again, it will do the whole selection, and it will do all the joists. We'll enter.

It will build your joist and send them into 3D. They'll give you a visual representation of what's going to be on site.

You can look for clashes. You can look for how the joist is going to put together and what they are connected to.

That is the command J3D.
