NOTE: Complete Lesson 1 before continuing with the challenges.

Congratulations! If you completed Lesson 1, you now have one more story told and one more page to add to your scrapbook album. Let me help you go farther.

Homework: Make a Master Folder

This class will have 10 individual lesson folders, but no master folder to hold it all. My recommendation is to

- Create a master folder on your computer.
- Name the folder "10-Timeless-Titles".
- Save it in an easy-to-find location, like your Desktop, while you're taking this class.
- Place your TTT1-01-Title-In-Mask-Download folder from Lesson 1 inside the new folder.

Challenge #1: Create a New Design

The Title PSDs you create in this class are designed to be versatile. So, test out the process.

- Create a page design completely different from the layered quick page you were given.
- Add the Title PSD layers to your new page.
- Change the mask to one from your stash. For an extra challenge, use more than one mask.
- Change the font. See how creative you can get.
- Save your page for sharing and post it in the Community Gallery.

Challenge #2: Create & Send a Card

Greeting cards are not just for making your friends and family feel special, they are also useful for when you want to create something pretty without having to fiddle with photos or journaling.

- Create a 6x4 card design using the Title PSD layers.
- Change the mask to one from your stash. In my card, I also added a heart to the Title In Mask group.
- Change the font. See how creative you can get.
- Save your page for sharing. Now that you've created it, you might as well send it via email or text to someone. It will be guaranteed to make their day!
- Post your card in our Card Library. You can post it as a flat card, or you can use our Tent Card Template.
