SQL ToDo Database

Primary Challenge

Create a SQL Server Data Tools Database project in Visual Studio. Build tables to hold todos, users, who owns which todo, when a todo was completed, and if/when a todo was deleted.

Bonus Challenge

Add the ability to have recurring todos, when each is due next, and the history of when a todo has been completed in the past. Create stored procedures for Lookup (per user) and History (per todo). Verify the Lookup only gets active, non-completed, non-deleted todos.

"Practice makes the master."
