FizzBuzz Challenge

Goal

Create a Console app that prints out Fizz when a number is divisible by 3, Buzz when divisible by 5, and FizzBuzz when divisible by 3 and 5. Create it as simply as possible, then refactor to only perform each division once.

Bonus

Refactor again to add in Jazz (7) and to accept any bounds (handle special number(s) correctly). Write it so that it can add more checks without adding more code. Then, create a reusable system that can apply rules in a specified order.

"Practice makes the master."
