- 1) At a recent trip to the movies, parking cost \$2, movie tickets cost \$21.50, popcorn costs \$6.75, and drinks cost \$4.90. Approximately what was the total expenditure?

$$2 + 21.50 + 6.75 + 4.90$$

↓ ↓ ↓ ↓ → 2 + 21 + 7 + 5

2 21 7 5

1) ≈ \$35

(rounded down, because other #'s were rounded up. To create balance.)

- 2) Suppose I need 7 bundles of hardwood flooring, and each bundle costs \$39.90. Approximately how much will I be spending?

\$39.90 → rounds to \$40

$$\begin{array}{r} \times 7 \\ \hline 280 \end{array}$$

2) ≈ \$280

Please evaluate.

- 3) How many times can a jug that holds $\frac{1}{4}$ of a gallon of water fill a 4-gallon jug?

1 gallon = 4 $\frac{1}{4}$'s

$\frac{1}{4}$
$\frac{1}{4}$
$\frac{1}{4}$
$\frac{1}{4}$

1 gallon

1 gallon = 4 quarter cups
2 gallons = 8 quarter cups
3 gallons = 12 quarter cups
4 gallons = 16 quarter cups

or $\frac{4}{\frac{1}{4}} = 4 \cdot \frac{4}{1}$

3) 16 fills

- 4) How many miles will I travel if my speed is 45 mph, and I drive for 5 hours?

45 miles in 1 hour
90 miles in 2 hours
⋮
225 miles in 5 hours

45 mph * 5 hrs =

4) 225 miles

- 5) Suppose Abbey's car can hold 15 gallons of gas when full. She'll then be able to drive for 300 miles. Please pose a question based on this information only, and then answer it. *(more than one answer exists)*

Q: "If Abbey can drive 300 miles with 15 gallons, how many miles can she drive with 1 gallon?"

A: $\frac{300 \text{ miles}}{15 \text{ gallons}} = \frac{20 \text{ miles}}{1 \text{ gallon}}$

Using proportions, 20 miles/gallon

Please complete the table below, by placing a check mark or X to indicate all sets of numbers that apply to the value of each expression.
