Digital Scrapper Quick Tip | Tools, Move Tool

Centering Within a Selection

by Jenifer Juris

When you combine the power of a selection with the Move tool, you can get perfect placement every time.

Quick Tips for Centering Within a Selection:

• Create a selection around the area you wish to center something. You can use any selection tool to make this selection, or you can Ctrl/Cmd click on a layer's thumbnail in the Layers panel to get a selection outline.

• Get the Move tool.

• In the Layers panel, make sure the item you wish to center within the selection is the active layer.

• In the Tool Options, click on the Align Horizontal Centers (Middle) icon and the Align Vertical Centers icon.
