

# Puppy proofing your home.

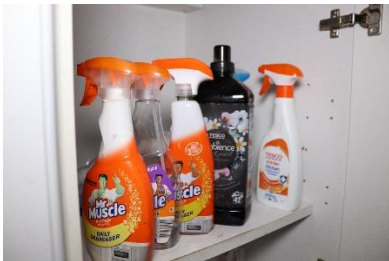

## 1) *Clear the cables.*

Cables, wires and cords should be bundled, tied and hung off the ground. Remote controls and anything that contains batteries should be stored out of the puppy's reach.

## 2) *Waste & rubbish.*

Puppies are curious and smells coming from bins can be enticing! Keep rubbish in closed bins and placed where puppies can't get to them.

## 3) *Cleaning products.*

Cleaning products contain dangerous chemicals, and puppies explore with their mouths and nose. If you are using harsh chemicals to clean floors and surfaces, this would be a good time to opt for gentle chemical free alternative.

## 4) *Toys and small objects.*

Plastic toys and small objects present choking hazards and can be toxic. Make sure that they are packed and safely stored away.

## 5) *House and garden plants.*

Many houseplants are toxic for dogs. Supervise your puppy when playing in the garden and lift house plants off the floor. Fertilisers, snail bait etc. should also be stored securely.

## 6) *Management is key.*

In times when you cannot supervise your puppy, they should be safely contained within a puppy pen, crate or enclosed area where they feel comfortable.
