

Nio Research Report

Written By: Lawrence Eggleston

If you are reading this, you are more than likely asking yourself how you missed this company before 10 dollars. Nio is a company that is way ahead of its time and many have called Nio the next Tesla. In this report I will highlight what kind of company Nio is and why it is a great investment in today's market.

Nio is an electric car company that sells premium vehicles and looking into the future we are moving into an age when soon all cars will be electric. The technology that Nio uses is next level and is only going to improve over time.

The initiative at Nio is to “envision a future where improved smart electric car technologies, coupled with a better car ownership experience, will drive increased appreciation and adoption of smart electric cars, leading to a more sustainable future for the planet”. This what they state on their company website and so imagine what can happen in just a matter of time.

The argument that I make with Tesla is going to be the same here at Nio and that is that they are more than a car company. You see what is happening in our

world now is that we are going through the fourth Industrial Revolution. A company like Nio possesses the power to use AI technology to operate cars and homes and produce energy. The Elites are understanding that the damage long term of using up natural resources will hurt us.

Next let us talk about this company's stock, Nio was only 2 dollars back in March when I signaled for everyone to invest in them. What was my reasoning you might ask, and it is because Tesla has no competition and what I saw is how much China really liked Nio. If you notice mostly everything comes from China and my thinking was if this company can get any headway in the media that it's stock will take off. All it took was this company to get some articles calling it "The Tesla of China" and boom Nio was at 10 dollars. You see the EV sector is a growing industry that will continue to grow the next five years. Nio is seeing gains in its stock because of the popularity that Electric cars are gaining and the demand. Ask yourself this question how many Nio cars have you seen on the road?

The answer to that question is none!!!!

So, think if the stock went from two dollars to thirty dollars from just hype what's going to happen when Nio puts cars on the road in America. You see Tesla won't be in this industry alone you will always have a B plus player or a number two. For example, you have Amazon and Shopify is the number two. One thought I have is Uber and Lyft we all know very soon that it will be no more human drivers and that the robo-taxis will be in full effect with that being said Nio will have the opportunity to enter a different market and be used on a mass scale. Nio has a great leadership team and is only going to improve over the years to come.

Overall Black Wall Street Originals is assigning a 50\$ price target on Nio going into 2021.

We recommend buying long options into late 2021 and 2022

We see Nio as a long-term winner and a stock that can provide you with an opportunity to see thousand percent returns on your Investment.

Me personally I purchased my first Nio shares at 2\$ a piece.

We set our price target here because we see an increase of demand in the EV industry and we see an opportunity for investors to get ahead here on this investment. Nio is gaining a lot of volume on their stock now so it is becoming a household name on the market.

Watch for other analyst to continue to raise price targets over the next 3-6 months.

Although we have a high price target, we suggest new investors to possibly wait before entering Nio as it is recently overbought.

Thank you
