- ✓ Patient Brochures

The "MD" device utilizes a higher-power motor with repetition rates up to 9,000 RPM to deliver fast and effective treatments. Microchanneling temporarily stamps hundreds of thousands of micro-injuries in the skin to be repaired by the production of new healthy collagen. A perfect amount of gentle stimulation to the skin produces "wound-healing without a wound! Post-treatment application of serum containing naturally-derived growth factors and peptides amplifies healing and restores biological communication that an aging immune system no longer provides.

Lithium-Ion Polymer Battery
Dimensions: 5" x 4.5"
Weight : 142g (.3 lbs)
Supply Voltage 110V-240V

\$3295

Step 1

Prepare the skin for microchanneling by disinfecting, cleansing and exfoliating.

Step 2

Microchanneling produces minimally invasive linear microchannels to be repaired with new healthy collagen.

Step 3

Post-treatment application of growth factor serum and hydration mask nourish the skin with essential peptides and nutrients for optimal skin health and maximize results.

ProCell Therapies is a complete anti-aging system that combines the effectiveness of cutting-edge skin rejuvenation techniques with the breakthrough of stem cell technology. ProCell turns back the aging clock with fast treatments and minimal irritation to the skin. A perfect balance of gentle stimulation complemented with enhanced infusion of nutritious and vital factors responsible for helping produce the best skin. With a system that only requires three to five treatments that last about 30 minutes each, popularity has grown to the point that now five new practices a day partner with ProCell to make the world feel better about our skin.
