

In this week's course, the student will understand how to recognize and write numbers 0-20. If students write numbers in reverse it is okay as long as it doesn't affect the place value. Students will understand that each successive number name is one larger and that the number of objects is the same no matter the arrangement.

This week will be **FUN**, *engaging*, and *exciting*. We will learn and become great mathematicians together. We will work hard and do our very best!

Remember it's NOT magic, it's math!

What you'll be learning to do during week 2:

- Read numbers 0-20.
- Represent a number of objects.
- Identify numbers that are one more than the previous number.
- Count a set of objects no matter the arrangement.
