

Weekly Challenge

Razor Pages User Logic

Primary Challenge

Create a page for users to interact with the soda machine. Build out just the PageModel with the code necessary to support a page that handles all the user-specific logic.

Bonus Challenge

Create task-specific post methods to handle the various tasks a user needs to perform. Also ensure that the text file data is properly wired up so that it can be used later when we add our HTML to the page.

“Practice makes the master.”
