

Hi, I'm Justin Putney, creator of in5, a tool which lets you create interactive content using Adobe InDesign. In this course, I'm going to show you how to upload that interactive content into a membership site using WordPress and a plugin called Wishlist Member. You'll learn how to protect your contents so that only members get access. I'll also show you how to collect payments, create sales pages, and how to customize the look of your storefront. If you're looking for a way to create a private pay wall on your own website, then look no further and join me as we create a membership site using in5, WordPress, and Wishlist Member.
