SLACK APPLICATION

The Slack application is a messaging app. It is very used in research institutes groups or companies. Using it we can send messages to individuals, but also to groups of people (#channels).

What type of files can we send?

- Text messages
- Voice messages
- Photos
- PDF
- Word documents
- PowerPoint Presentations
- Excel file
- Videos….

NOTE: All the files that are sent, can be downloaded.

Why it is better than WhatsApp?

It is better for professional groups because there is a higher level of organization. We can use threads to reply to a specific message and person.

Why are we using it in this course?

2 in 1. Like this whoever never used it can learn how to since we are sure that this will be a tool at the lab.
