

Other Updates				
Pattern Guide version	Update			
April26 v3	Added "Additional Designs" Section pages 86-88. Contains designs for Single & Multiple Field(s) Display and Custom Text & Field Display.			
Pattern Guide area/page (mar25 pdf)	issue	Comments	Status	Apr10&26 Pattern Guide Page No.
progress bars hidden state	"Hidden State - Alert/Partial Success - user has the ability to close the overlay window (select "x") , or View Details. Exception: if the result of the progress requires that the user complete some actions in the modal, then the "x" is not available and the user must select View Details to finish the actions in the context of the modal window. As an example this would happen at the completion of Discovering Nuance Card Readers. The user must return to the modal to Import."	added image for discovered card readers finished state - and details when to show "x" to close	UPDATED	p32
"x" in modal - pg 32 of PG	what does modal window "x" do for a process that is underway - when user can or can't cancel process	added details for "x" to close/cancel processing window for In Progress Results (modal window)	UPDATED	p30
buttons	Button Hierarchy -There needs to be a little more detail in the pattern guide (PG) in regards to button hierarchy and placement. I	added Form button placement expamples for Primary & Secondary buttons on p44	UPDATED	p44

April10 Pattern Guide Updates				
Pattern Guide area/page (mar25 pdf)	Justin Question (mar25 pdf)	Comments	Status	Apr10&26 Pattern Guide Page No.
New - Loading patterns (include in assoc w saving PG p26)	For instance, when loading devices, do we show a loading spinner before the devices are visible.	Yes - do we need two states of spinner - one with text saving, the other loading Refer to "Activity Indicator - Loading Spinner"	ADDED	p27
	Also, do we show a spinner always in that situation, or do we wait 3 seconds and if devices still aren't there, then show a spinner, etc.	Refer to Refer to "Activity Indicator - Loading Spinner"	ADDED	p27
	Also, what happens when there are no devices returned, do we have a label display in the middle of the device list that contains no devices and say to the user that there are no devices, or do we indicate somewhere that we finished loading devices. My concern is that if we don't have any indicator, users won't know if there are no devices, or if they are loading.	Refer to Refer to "Loading - No Results or Error"	ADDED	p28
	Also, if there was an error retrieving the devices, what do we do then, do we show a popup or do we display text over the table stating that there was an error loading?	Refer to Refer to "Loading - No Results or Error"	ADDED	p28
	Also, what about main content areas that have lots of data to show such as a device details page. Do we show a spinner until all of the device data has been retrieved, or do we show all of the fields with "Loading..." text instead of the values until the data has been retrieved?	Refer to Refer to "Activity Indicator - Loading Spinner"	ADDED	p27
	What happens if there was an error, do we show an error overlay so that the user can't edit the page, but can try to reload the data?	Refer to Refer to "Loading - No Results or Error"	ADDED	p28
Save spinner	On page 26: is the saving spinner supposed to be in the middle of the page, or the middle of the main content area. In the image it isn't obvious.	Renamed to Activity Indicator - Saving Spinner. Added text: "The Spinner is centre aligned in the middle of the application display/page. While the Spinner is displayed, the entire application is in a disabled "greyed out" state behind the Spinner."	UPDATED	p26
Page Form Display - Add/Edit - PG p18	On page 18: can you please add an example field with a "".	done - also added "Note: Some Wireframes shown in the Pattern Guide reflect an out-of-date design ("All fields required unless otherwise indicated" was updated). Wireframes do not reflect all actual required form fields (those shown are for an illustrative purpose)."	UPDATED	p18
Save button disabled state - page form/modal	If the save button is in a disabled state until there are no errors for all setting categories if applicable, it may be confusing to a user. Not all users read the whole page when they are interacting with it. It may be beneficial to not disable the button, but to indicate to the user that they have errors for some fields.	All client-side errors should be displayed and apparent to the user as they go thru the form filling. Form Field Validation & Error Handling - added text: "For client-side validation, such as required fields, a field error is displayed in real-time, for any required fields that have been "skipped" by the user in the form field filling sequence order, or have been entered but do not meet field validation requirements.	UPDATED	p57
Alert/Toast w link	On page 27: when the toast contains a link, does it still only appear temporarily (for 30 seconds). Is there a way to dismiss the toast?	All toasts disappears after 30s. Can close with "x" - diff than wireframe. - updated text	UPDATED	p34
Multi-select dropdown text value too long - PG p40	For the Multi-select Drop-down on page 40: what happens when there is not enough horizontal space to display the selected values? Does it show it in more rows?	discussed with Dinesh...no text-wrapping in component that was delivered. Added text: "the drop-down list of available values does not have a set maximum horizontal width; it can extend to accommodate the display of values that may exceed the default width (values do not text wrap)."	UPDATED	p43
Disclosure buttons - Labels - PG p47	Page 47 - labels disclosure button: not sure what this is. Please provide more details.	aded a more detail...(now on its own page)	UPDATED	p52
Search - more info needed - PG p72	Page 72: When performing a search, when does the search get applied? Do you need to press the search button after entering the search text?	aded a more detail to #2 and #3 - re when search applied.	UPDATED	p77
Progress Bar - Hidden State - PG p32	Authentic Insight says the minimized progress is now at the top of the screen.	added position update in note	UPDATED	p32
Progress Bar - Hidden State - PG p32	Also, what happens when there is a minimized progress at the top of the screen and there is a toast?	stacked hierarchy - stays fixed at top with toast showing up underneath. Added note in Progress Bar-Hidden State, and Notifications - Alert/Toast	UPDATED	p32

From Apr4 email				
Pattern Guide area/page (mar25 pdf)	Justin Question (mar25 pdf)	Comments	Status	Apr10&26 Pattern Guide Page No.
Need more details on when to use "Apply", "Reset" operations and "Save", "Cancel" operations	<p>Need more details on when shall we use "Apply", "Reset" operations and "Save", "Cancel" operations?</p> <p>It seems like we shall name button as "Save" when we are going to create some new entry (like user, department) and button to be named "Apply" when we are going to edit configuration.</p> <p>Page 18-19 in attached guide shows use of "Cancel" operation whereas Page 20-21 shows use of "Reset to Last Saved Settings" operation.</p> <p>My initial understanding was that "Cancel" shall be used only for modal dialogs as we need to close them.</p> <p>Also, once "Save" operation succeeds shall we stay on the same page or go back to previous page?</p>	<p>Details for when to use Apply vs Save for form pages outlined on pages 54 &amp; 55 (in Save Models, Validation &amp; Errors Section)</p> <p>Answers to questions all on those 2 pages.</p> <p>- Added info re Cancel button - p54</p> <p>- Added "reset to last saved" button info - only for "apply" form types - p55</p> <p>Also added Form button placement examples for Primary &amp; Secondary buttons on p44 and more details on Page Form Display - Add/Edit p18</p>	UPDATED	p18, 44, 54, 55
Page8: Secondary Navigation Exposed	<p>Item 1, Secondary navigation – When a secondary navigation is exposed what is seen on the right side of the menu? Is it information page regarding all the links under the Primary Navigation link? <b>NF: No</b></p> <p>As I can see it is showing content of the first link is it the default behaviour ?</p> <p><b>NF: Yes - that is correct. Annotation in Pattern Guide states "If secondary navigation exists, then selecting the primary item will navigate the user directly to the first secondary navigation item."</b></p>	added some more text to make more clear.	UPDATED	p8
Page14: Sidebar Navigation Cont..	item 1&2, Sidebar Navigation for Default Settings &.. – I could not understand how it functions and its use?	updated text to make more clear...also added e.g. of sidebar nav with count	UPDATED	p13 & 14
Page19: Page Form Display – Multiple ....	<p>item 1, Title with.. – Is this feature necessary ? because almost all our devices have different settings. And have we identified enough scenarios where it can be useful ?</p> <p><b>NF: Yes - in our design review sessions it was determined that we need this. If I recall correctly, the ability to "Edit All" common settings for multiple selected devices is in the current product (going forward, it may also be needed for editing multiple objects that are not devices).</b></p>	no update...		
Page22: Form with Dynamic info..	<p>item 1, Dynamic.. – Are the information only appear when certain text box or drop down is focused and disappears as soon as focus is gone ? because that is how it should work but it is not explicitly shown in images or in mentioned information.</p> <p><b>NF: Definitely no. The associated field detail information is persistent once a field value is specified. Will add this detail to the annotations. We use this pattern for rule building - refer to wireframes: <a href="https://www.dropbox.com/s/kre38ui14z5fj/Equitrac%20Rules%20WFs%20Jan19.pdf?dl=0">https://www.dropbox.com/s/kre38ui14z5fj/Equitrac%20Rules%20WFs%20Jan19.pdf?dl=0</a></b></p>	Added text: "The associated field detail information is persistent once a field value is specified (it doesn't disappear when another field is in focus)."	UPDATED	p22
Page25: Page Titles..	<p>item 3, Page Titles .. – Are "parent" page name a hyper link?</p> <p><b>NF: No - will add to annotation to make this clear.</b></p>	added "Note: The parent object text is not a link, and is for informational purposes only."	UPDATED	p25
