A chatbot developer's guide to Google I/O 2017

Google I/O 2017 got done a week back. While I didn't attend the event live, it doesn't matter as Google makes all the recordings available on YouTube. 😊

Here are the videos from the event that would be of interest to most chatbot developers.

Building Rich Cross-Platform Conversational UX with API.AI (Google I...

API.AI helps developers build unique conversational experiences for their products, services and devices. It provides a toolset for designing

interactions with users and a powerful natural language understanding engine to process user requests.

Actions on Google: Building Apps for Assistant

Join Sachit Mishra for a screencast on building an Assistant app for Actions on Google using API.AI.

Building Apps for the Google Assistant (Google I/O '17)

The Google Assistant's mission is to help users get things done in their world. This session will explain how to plug into the Google Assistant services ecosystem. We'll cover everything from understanding the business use case and high level user interface design to implementation and growing usage.

Bringing the Google Assistant to Any Device (Google I/O '17)

The Google Assistant SDK allows you to put the power of Google's speech, understanding, knowledge and machine learning into nearly any device, including speakers, appliances, robots, and other connected things that listen and respond.

Home Automation with the Google Assistant (Google I/O '17)

Come learn how to use the Actions on Google platform for home automation integrations. You will walk away from this session with the skills necessary for the Google Assistant to control your smart home devices.

•

Getting Your Assistant App Discovered (Google I/O '17)

If an action speaks in the forest and no one hears it, did it make a sound?
The focus for this talk is discovery -- we want users to be able to find the
awesome Actions on Google experiences you've built.

Transactions with the Google Assistant (Google I/O '17)

Users are turning to the Google Assistant to help with more real world tasks
like scheduling appointments, booking services, and shopping. Enable your
users to make purchases and set appointments with the Actions on Google
platform.

Finding the Right Voice Interactions for Your App (Google I/O '17)

Imagine trying to read a website through a straw... mentally processing an audio signal feels a lot like that. In our new era of computing where advancements in conversational UIs and artificial intelligence are enabling users in new ways, it's easy to be tempted to take an existing visual-based app or GUI and simply "convert it to voice".

In Conversation, There Are No Errors (Google I/O '17)

When building a Conversation Action for the Google Assistant, consider that so-called "error events" don't have to be treated as edge cases. Instead,

these can become opportunities to forge meaningful exchanges that leverage users' mental models of how everyday conversations unfold.

• •

PullString: Storytelling in the Age of Conversational Interfaces (Googl...

While the medium may change, the story remains the key element in engaging audiences. Come learn from the storytelling masters at PullString how they apply the learnings from over a decade working at Pixar to the new medium of conversational interfaces
