

Episode Title: Using Storage Migration Service

Objectives:

At the end of this episode, I will be able to:

1. Describe the Storage Migration Service
2. Collect the inventory of an existing server
3. Migrate to Azure using the Storage Migration Service

Key Points:

Key Point 1

The Storage Migration Service provides comprehensive data transfer between file servers or to Azure, while retaining permissions, attributes, and more.

Key Point 2

The Storage Migration Service enables you to collect an inventory of file shares and data to prepare for migration.

Key Point 3

The Orchestrator server manages the migration and allows you to perform test migrations before committing to the cutover.

- If additional resources are used during the episode, they can be obtained using the download link on the overview episode (e.g. diagrams, no powerpoints)

External Resources:

If external resources were used during this episode, you can reference the following external resources for supplementary tools and information, if none were used, then this section will be blank:
