

Episode Title: Migrate Active Directory objects and domains

Objectives:

At the end of this episode, I will be able to:

1. Assess an existing AD DS environment
2. Establish trusts between environments
3. Use Active Directory Migration tool

Key Points:

Key Point 1

Assessing your existing environment, including Domain Controllers, Group Policy, and Azure integration, is crucial for understanding the state of your directory service.

Key Point 2

To complete a migration between environments, the two directories must trust each other. The best practice is to establish a forest trust between the two environments before migrating the objects.

Key Point 3

The Active Directory Migration Tool provides a simple graphical interface for migration different directory objects, including user accounts, computer accounts, and organizational units.

- If additional resources are used during the episode, they can be obtained using the download link on the overview episode (e.g. diagrams, no powerpoints)

External Resources:

If external resources were used during this episode, you can reference the following external resources for supplementary tools and information, if none were used, then this section will be blank:

- Active Directory Domain Services migration
