

Episode Title: Manage failover clusters using Windows Admin Center

Objectives:

At the end of this episode, I will be able to:

1. Explain the different ways to manage a failover cluster
2. Use the Windows Admin Center to manage a cluster
3. Perform cluster validation from the Windows Admin Center

Key Points:

Key Point 1

The historical tool for managing a failover cluster is the Failover Cluster Manager MMC snap-in.

Key Point 2

The Windows Admin Center provides a modern, web-based interface to perform management of Windows Servers.

Key Point 3

Most all failover cluster management actions, including cluster validation, can be performed from the Windows Admin Center.

- If additional resources are used during the episode, they can be obtained using the download link on the overview episode (e.g. diagrams, no powerpoints)

External Resources:

If external resources were used during this episode, you can reference the following external resources for supplementary tools and information, if none were used, then this section will be blank.:
