

Episode Title: Using Azure Backup Server

Objectives:

At the end of this episode, I will be able to:

1. Describe Azure Backup Server
2. Install the Azure Backup Server
3. Configure backup and recovery using Azure Backup Server

Key Points:

Key Point 1

The Azure Backup Server is an installable solution for Windows Server. It supports application-specific backups for Exchange, SQL Server, SharePoint, and more.

Key Point 2

The Microsoft Azure Backup Server provides both local and cloud backup options.

Key Point 3

Backup data is encrypted in-transit and at-rest. It provides built-in compression to reduce storage costs.

- If additional resources are used during the episode, they can be obtained using the download link on the overview episode (e.g. diagrams, no powerpoints)

External Resources:

If external resources were used during this episode, you can reference the following external resources for supplementary tools and information, if none were used, then this section will be blank:

- Install and upgrade Azure Backup Server
