

## Episode Title: Troubleshoot hybrid network connectivity

### Objectives:

At the end of this episode, I will be able to:

1. Understand hybrid connectivity methods
2. Use Network Watcher
3. Use CLI troubleshooting tools

### Key Points:

#### Key Point 1

There are a few different connectivity options for hybrid scenarios depending on your organization's needs. The two most common are site-to-site VPNs or ExpressRoute.

#### Key Point 2

Azure Network Watcher is a valuable tool for you to monitor the health and performance of Azure network resources.

#### Key Point 3

A good troubleshooting technique is to start with the basics. Use simple tools like ping, traceroute, and tcping to test low-level networking connectivity.

- If additional resources are used during the episode, they can be obtained using the download link on the overview episode (e.g. diagrams, no powerpoints)
