

Episode Title: Configure authentication policy silos

Objectives:

At the end of this episode, I will be able to:

1. Define authentication policies and policy silos
2. Explain when to use authentication policy silos
3. Create policy silos using the Active Directory Admin Center

Key Points:

Key Point 1

Authentication Policy Silos are typically used with Protected Users.

Key Point 2

These policies define the Kerberos ticket-granting ticket properties, such as TGT lifetime and device requirements.

Key Point 3

Authentication Policy silos can be applied to user accounts, service accounts, and computer objects.

- If additional resources are used during the episode, they can be obtained using the download link on the overview episode (e.g. diagrams, no powerpoints)

External Resources:

If external resources were used during this episode, you can reference the following external resources for supplementary tools and information, if none were used, then this section will be blank.:
