

Episode Title: Migrate print servers

Objectives:

At the end of this episode, I will be able to:

1. Plan for a print server migration
2. Export settings using the Printer Migration Wizard
3. Update Group Policy for new deployments

Key Points:

Key Point 1

Planning for a printer server migration can be critical as driver versions or compatibility can become an issue. Ensure that you have tested drivers with various client devices to ensure they can all print before completing the migration.

Key Point 2

Use the Printer Migration Wizard to easily export queues, drivers, and other print settings from the old server to the new server.

Key Point 3

If the print servers name will change, or you have updated other printers, ensure that you also update Group Policy that is deploying the printers to the client devices.

- If additional resources are used during the episode, they can be obtained using the download link on the overview episode (e.g. diagrams, no powerpoints)

External Resources:

If external resources were used during this episode, you can reference the following external resources for supplementary tools and information, if none were used, then this section will be blank:

- Migrate Print and Document Services
