

Episode Title: Configure recovery for on-premises VMs

Objectives:

At the end of this episode, I will be able to:

1. Explain site recovery for on-premises VMs
2. Configure an Azure Recovery Services Vault
3. Backup an on-premises VM using Azure Recovery Services

Key Points:

Key Point 1

Azure Site Recovery uses the site recovery agent to perform backups for on-premises VMs.

Key Point 2

On-premises backups still use Site Recovery backup and retention policies.

Key Point 3

On-premises VM backups that are performed with Azure Site Recovery can be restored locally or as an Azure VM.

- If additional resources are used during the episode, they can be obtained using the download link on the overview episode (e.g. diagrams, no powerpoints)

External Resources:

If external resources were used during this episode, you can reference the following external resources for supplementary tools and information, if none were used, then this section will be blank.:

- Prepare Azure for on-premises disaster recovery to Azure
