

# Limitations of the Ionic View App

---

The ionic view app is useful however has some very specific limitations.

It comes with a **fixed set of cordova plugins**

Therefore If your app needs a plugin which the ionic view app doesn't support then **your app won't work in the ionic view app.**

Also it's impossible to debug issues with the ionic view app since you can run it with xcode or view the logs.

To see the full list of plugins supported by the ionic view app visit this link:<http://docs.ionic.io/docs/view-usage>
