

# Cats Intro

# Cats Organization

Most important functionalities are type classes

```
import cats.YourTypeClass
import cats.instances.yourType._
import cats.syntax.yourTypeClass._
```

use your type class API

bring implicit TC instances for  
your supported type in scope

use extension methods your TC  
supports

Some imports are not self-evident – import all:

```
import cats._
import cats.implicits._
```

**Cats rock**
