

Stabilizer for machine embroidery

Medium cutaway stabilizer

A cutaway stabilizer stays in your garment. A medium weight stabilizer is ideal for rugged clothing.

Fusible poly mesh stabilizer

A fusible poly mesh is also a cutaway stabilizer, but it can be ironed onto the garment. It is an ideal stabilizer to use when you are embroidering on knit garments.

Adhesive backed tear away stabilizer

A stabilizer tears away from the embroidery. It's an ideal stabilizer for projects that do not require permanent stabilization. It can be used as a base for floating projects.

Water soluble stabilizer

This stabilizer dissolves completely in water. It's an ideal stabilizer for in-the-hoop or free-standing lace projects when you want the stabilizer to completely disappear after the project is done.

Water soluble topper

A water soluble topper should be used when embroidering on nappy fabrics like towels. It tamps down the fibers in the fabric to keep them from poking through the stitching.

Cloud Cover or Fuse So Soft or Tender Touch

A material that fuses to the back of the embroidered area on a garment to prevent skin irritation.

Heat n Bond Lite

A material that is fused to applique fabric to prevent raveling and to help it stick to your project.
