[ProPresenter 6: Tour of the UI](#)

Tour of the UI (User Interface):

This is ProPresenter 6 and let's take a look at the various things that we have here.

First off, this is the window where you'll normally see what's actually going up on screen but in ProPresenter 6 you can also see what's going on on the stage display there as well. That's something for you to keep in mind. Under that and that can be re-sized by the way. In fact, I'm going to do this and just so that you can see more of the other elements of the UI.

Next we have the libraries underneath, you can sort them by title, category, last used date, etc., also search for them there.

Then underneath that we have playlists. I've got multiple playlists here in this particular one.

And this is the section where you can see all the slides that you can choose from. You'll notice this one is grayed out. All that means is it's still available but it's no longer going to be skipped over so I were to. This is on auto timer but let's say this was a song like this, okay. See how I've got multiple flags, if one was grayed out, let's do that real quick by right clicking and clicking to save the slides. If it's grayed out and I hit the space-bar, it skips right over that but it's still available so that's a handy little thing for you to know.

If it's grayed out and I hit the spacebar, it skips right over that, but it's still available...

I'm going to right click, select enabled slides, that brings that back. Now you'll see I've got this icon up here that says "Video Image", that brings up the video image bin, which again, I can re-size just by bringing the cursor down to the line and clicking and dragging. Background videos, we'll talk more about those later for ground videos. We'll talk more about those later, etc. That's the basic UI, you'll notice that up here we have different icons. You may or may not have all the icons that I have, I've chosen the ones that I prefer. You can change those at any time.

What's very useful though is the clear all, clear slides, etc. These icons in here are clear all clears everything so that's the basic layout of ProPresenter. This is the stuff you have access right now, this is the entire service videos for grounds or backgrounds. Core ground videos can be in here or they can be mixed amongst your slides if you need them that way. This is your library where you have all your songs, all your basically any element in the worship service would live here first and then you can access it at any time.

Paul Alan Clifford

The ProPresenter Guy

Paul@TrinityDigitalMedia.com

Paul is a volunteer video guy who's been on his church's tech team since 2000 and the Founder of TrinityDigitalMedia.com, llc.

He started doing ProPresenter screencasts on September 25, 2012 and now has over 13 hours of tutorials on YouTube.

You may not want to reuse speaker notes for example but you would want to reuse worship songs so all that lives there and you can organize those again by category so you can. You do that, you'll notice that I've got these presentations and I have songs and then I've got speaker notes and then I've got worship. That can really help you when you're organizing this. That's just a basic overview of the user interface UI in ProPresenter 6.
