

# Weekly Challenge

## Azure Deploy

### Primary Challenge

Deploy the web application to a free Azure Web App. Ensure that it successfully deploys. You will not be able to run the application yet because you need a SQL database for authentication.

### Bonus Challenge

Create a cheap SQL database for the authentication and ensure that the application now runs on Azure. Add a user, add the Admin Role, and add the user to the role.

*“Practice makes the master.”*
