

Digital Scrapper Quick Tip | Tools, Magic Wand Tool

Understanding the Tolerance Setting

by Jenifer Juris

The Magic Wand tool can be such a helpful tool. But you have to know how it works in order to get the most out of it.

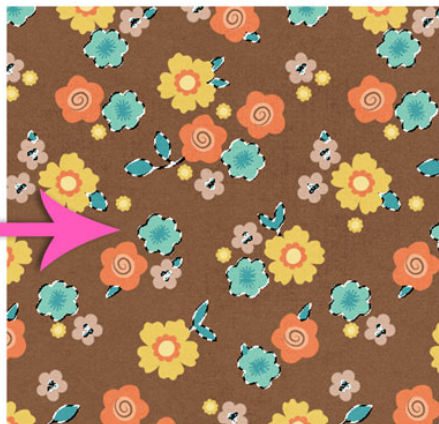

© 2024 Digital Scrapper, [Terms of Use](#), For Adobe Photoshop and Photoshop Elements

TOLERANCE: 32

SELECTS ONLY DARKER BLUE

TOLERANCE: 100

SELECTS BOTH SHADES OF BLUE

Quick Tips for Using the Tolerance Setting of the Magic Wand Tool:

- The Magic Wand tool allows you to make one-click selections of a color or range of colors.
- The Tolerance can be set to any number between 0 and 255.
- The lower the Tolerance, fewer colors will be selected.
- The larger the Tolerance, more colors will be selected.
- Adjust the Tolerance as needed to get the right range of colors selected.
- If needed, change the Tool Settings from New Selection to Add to Selection in combination with a lower Tolerance to select more than one shade of the same color. (This is often needed when the document has many colors from the same color family.)
