.NET Command Line

Primary Challenge

Create solution on the command line. Create an ASP.NET Core Razor Pages application on the command line and associate it with the solution. Create a class library from the console that is in the solution and referenced by the web application.

Bonus Challenge

Create a .NET Core 3.0 Azure Function app from the command line with a Timer trigger. This may require you to add a package to upgrade the dotnet command line.

"Practice makes the master."
