# IDEMPOTENCE

$$F(F(X)) = F(X)$$

# DEFINITION

## IDEMPOTENCE

*“ Idempotence is the property of certain operations in mathematics and computer science, that can be applied multiple times without changing the result beyond the initial application.”*

Which can be simply represented by,

$$F(F(X)) = F(X)$$

First time I read that, I had the  
same expression !!

**LETS SIMPLIFY THAT A BIT.....**

## Red Hat to Acquire IT Automation and DevOps Leader Ansible

*Red Hat advances frictionless IT with simplified management for hybrid clouds, OpenStack environments and container-based services*

October 16, 2015 06:58 AM Eastern Daylight Time

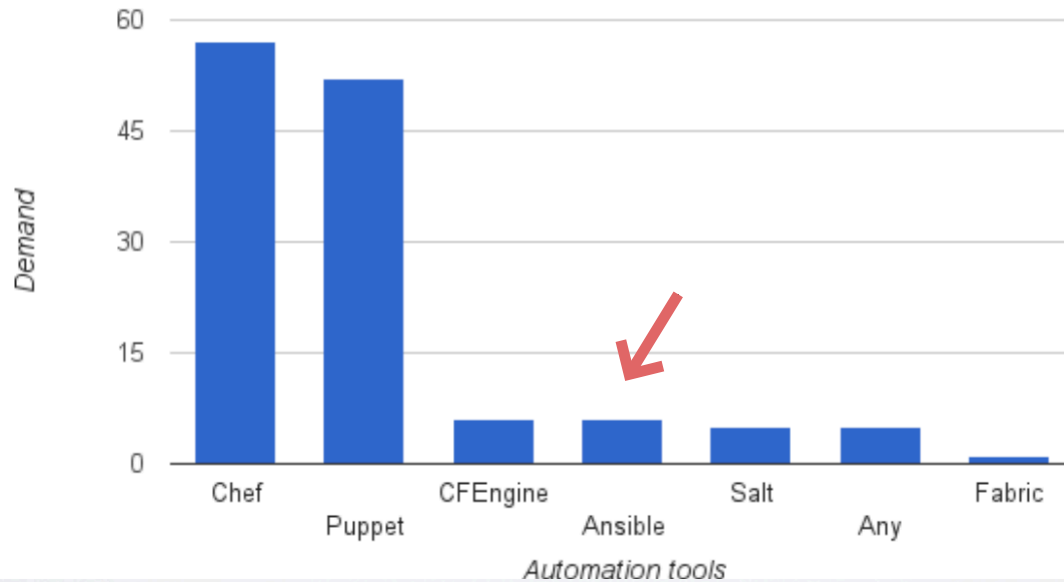

RALEIGH, N.C.--(BUSINESS WIRE)--Red Hat, Inc. (NYSE: RHT), the world's leading provider of open source solutions, today announced that it has signed a definitive agreement to acquire Ansible, Inc., a provider of powerful IT automation solutions designed to help enterprises move toward frictionless IT. Ansible's automation capabilities, together with Red Hat's existing management portfolio, will help users drive down the cost and complexity of deploying and managing both cloud-native and traditional applications across hybrid cloud environments. With today's announcement, Red Hat expands its leadership in hybrid cloud management, OpenStack and containers.

Ansible's simple and agentless approach, unlike competing solutions, does not require any special coding skills, removing some of the most significant barriers to automation across IT. From deployment and configuration to rolling upgrades, by adding Ansible to its hybrid management portfolio, Red Hat will help customers to:
