

# Weekly Challenge

## Azure DevOps

### Primary Challenge

Create an Azure DevOps project and add a new ASP.NET Core project to it. Create a bug report under Work Items and then create a commit that addresses the bug report. Associate the bug with the commit.

### Bonus Challenge

Enable Continuous Integration and Continuous Deployment (CI/CD) using Pipelines. Build every branch. Deploy only the master branch to Azure automatically.

*“Practice makes the master.”*

— Patrick Rothfuss
