

Routing TestKit

Recap

Test Akka HTTP routes

```
Get("/api/my/endpoint") ~> myRoute ~> check {  
  // your assertions here  
}
```

the route under test

can also send POST, DELETE etc
(even with payload)

```
status shouldBe StatusCodes.OK
```

```
rejections should not be empty
```

For granular assertions:

```
response.status shouldBe StatusCodes.OK
```

```
responseAs[MyType] shouldBe myDesiredValue
```

```
entityAs[MyType] shouldBe myDesiredValue
```

Akka rocks
