

# DIY Wooden Felting Tool Hole Template

Outer diameter is 1.25 inches or 31.75 mm; 12 holes arranged in an inner and outer circle/two inverted triangles.

Spacing between holes doesn't have to be perfect to work, but do make sure holes are drilled perpendicular so needles won't angle towards or away from each other.

Note that no holes are drilled in the center because the threaded insert nut needs to go there, as you can see in this photo.
