Extension Methods

Primary Challenge

Create two extension methods. One called Print that prints a string to the console like so: "Hello World".Print() and one called Excite that replaces all periods with exclamation points like so: "Hello World.".Excite()

Bonus Challenge

Create this chain for a Person object: <person>.Fill().Print(); where Fill asks the user for each property's value and print will print all properties to the console. Then create this chain on a double: <double>.Add(4).Subtract(2).MultiplyBy(8). DivideBy(3);
