

Digital Scrapper Premier 2023, Volume 6

Lesson 3, Adjustable Arrow Accent (Adobe Photoshop)

by Jen White

Capture the little-known secret weapon of the Line tool by creating an adjustable arrow accent that packs a bevel plastic punch.

NOTE: Please complete the lessons in the order they are provided.

For this lesson you will need:

- the Shaped-Frame-Cluster document from the Class-Files folder that you saved at the end of Lesson 2.
- the arrow-practice image from the Class-Files folder.
- the PlasticStrokedAction (styles and action) from the Class-Files folder. (Loaded)

Quick Steps for Lesson 3, Adjustable Arrow Accent

Step-by-step instructions are below.

- Open the arrow-practice image from the Class-Files folder.
- Open the Shaped-Frame-Cluster document from the Class-Files folder.
- Activate the FRAMES group and close it.
- Create a new document and reset the Color Chips.
- Get the Line tool and reset it.
- Practice creating different-sized arrow shapes.
- On the arrow-practice document, practice creating additional arrow shapes.
- Move an arrow shape onto the Shaped-Frame-Cluster document.
- Resize the shape, if necessary.
- Activate the Plastic action and press Play.

Step-By-Step for Lesson 3, Adjustable Arrow Accent

Before You Get Started

- In the Styles panel (Window > Styles), open the flyout menu and choose Import Styles. Navigate to the DSP23-V6-PlasticStrokedShape.asl file in the PlasticStrokedShapeAction folder from the Class-Files folder. Click Load/Open.
- In the Actions panel (Window > Actions), open the flyout menu and choose Load Actions. Navigate to the PlasticStrokedShape.atn file in the PlasticStrokedShapeAction folder from the Class-Files folder. Click Load/Open.

Prepare Your Workspace

- Open the Shaped-Frame-Cluster document (File > Open) that was saved at the end of Lesson 2.
- In the Layers panel, click on the FRAMES group to activate it and close it.

Prepare a Practice Document

- Create a new 12 x 12 inch document (File > New) at 300 ppi with a white background.
- Press the letter D to reset the Color Chips to the default of black over white.

Create an Arrow

- Get the Line tool.
- In the Tool Options, set the Tool Mode to Shape. Open the Fill options. Set the Fill Type to Solid Color. The Color Chip should be black; if it's not, click on the Color Picker icon, choose black, and click OK. Open the Stroke options. Set the Stroke Type to No Color. Open the Path Operation and choose New Layer. Open the Path Options. Uncheck Live Shape Controls. Uncheck Start, but check End.

- In the Tool Options, set the Weight to 500 px. Open the Path Options. Set the Arrowhead Width to 500 px, the Arrowhead Length to 500 px, and the Concavity to 0.
- On the document, click and drag out an arrow from left to right.

NOTE: If you'd like your arrow to be horizontally or vertically straight, hold down the Shift key while dragging.

Create a Second Arrow

- In the Tool Options, set the Weight to 250 px. Open the Path Options. Set the Arrowhead Width to 500 px, the Arrowhead Length to 500 px, and the Concavity to 0.
- On the document, click and drag out an arrow from left to right.

Create a Third Arrow

- In the Tool Options, set the Weight to 250 px. Open the Path Options. Set the Arrowhead Width to 500 px, the Arrowhead Length to 250 px, and the Concavity to 0.
- On the document, click and drag out an arrow from left to right.

Use the Practice Image

- Open the arrow-practice image (File > Open) from the Class-Files folder.

How To Use the Practice Image

- Get the Line tool.
- To choose an arrow color, in the Tool Options, click on the Fill Color Chip and click on the Color Wheel icon. Choose a new color in the Color Picker or sample one from the document. Click OK to close the Color Picker.
- To set the thickness of the base of the arrow, in the Tool Options, set the Weight based in pixels.
- To set the shape of the arrowhead, in the Tool Options, open the Path Options and set the Arrowhead Width and Arrowhead Length based in pixels. To change the number of arrowheads, check or uncheck the Start and End options.
- Click and drag on the document.

- If incorrect, press Ctrl Z (Mac: Cmd Z) to undo, adjust the settings in the Tool Options, and then try again.
- If correct, move on to the next shape.

NOTE: If you need help with the settings for each arrow in the practice image, you'll find them at the end of this manual.

(Optional) Save the Practice Document

You could use the practice document to save different kinds of arrows that you make. Then you don't have to look up the settings later.

- Save the practice document (File > Save) as DSP23-V6-Arrow-Practice.psd in the Class-Files folder.

Add an Arrow to Your Scrapbook Page

- In the Layers panel, activate the arrow layer that you like best. I'll activate the blue one because I like that shape.
- Get the Move tool.
- From the document, click and drag the arrow onto your Shaped-Frame-Cluster document.

Adjust the Arrow

NOTE: Before running the Plastic action, you need to make the shape the size you want it to be on your final scrapbook page. To do that:

- Press Ctrl T (Mac: Cmd T) to get the Transform options.
- To resize the shape, on the document, click and drag from the corner handles of the bounding box.
- To move the shape, click and drag inside the bounding box.
- To rotate the shape, hover your cursor near a corner handle of the bounding box until you see a curved, double-headed arrow, and then click and drag to rotate.
- Click the checkmark to commit the change.

Pre-Action Checklist

- The styles that came with the action must also be loaded. The action must also be loaded.
- The shape or element you're running the action on needs to be just one layer and cannot be a group.

Play the Action

- In the Actions panel, in the DSP23-V6 Plastic Stroke Shape folder, click on the DS Plastic Stroked Shaped action and click the Play icon.
- In the dialog box, press Continue to confirm the reminders. If you have not loaded the styles or resized the shape, press Stop, fix the errors, and press Play again.

NOTE: If you get an Error Message while playing the action, try reinstalling the styles.

How to Change the Color of the Plastic

- In the Layers panel, double click on the layer style of the Plastic group to open the style settings.
- Click on Stroke to activate the settings.
- Double click on the Color Chip to open the Color Picker.
- In the Color Picker, choose a new color (or sample one from your document) and click OK.
