Interactive animation can be exported as an OAM package from both Adobe Animate and Tumult Hype. This single-file format is easy to use in InDesign. You just place it like any other graphic format.

So to begin, open the InDesign file for lesson 07_02. Then, choose File > Place and place the waste_chart.oam file on the page. Scale the frame and the contents to 75% and then center it horizontally on the page.

Export with in5 and preview the result.

Nice. That really couldn't be easier, right? If you create content in Animate or Hype or hire someone who does, use the OAM file format to keep things simple!
