

Training a Neural Network

Hyperparameters

Neural Networks Hyperparameters

So you want to be
a data scientist?

List of hyperparameters

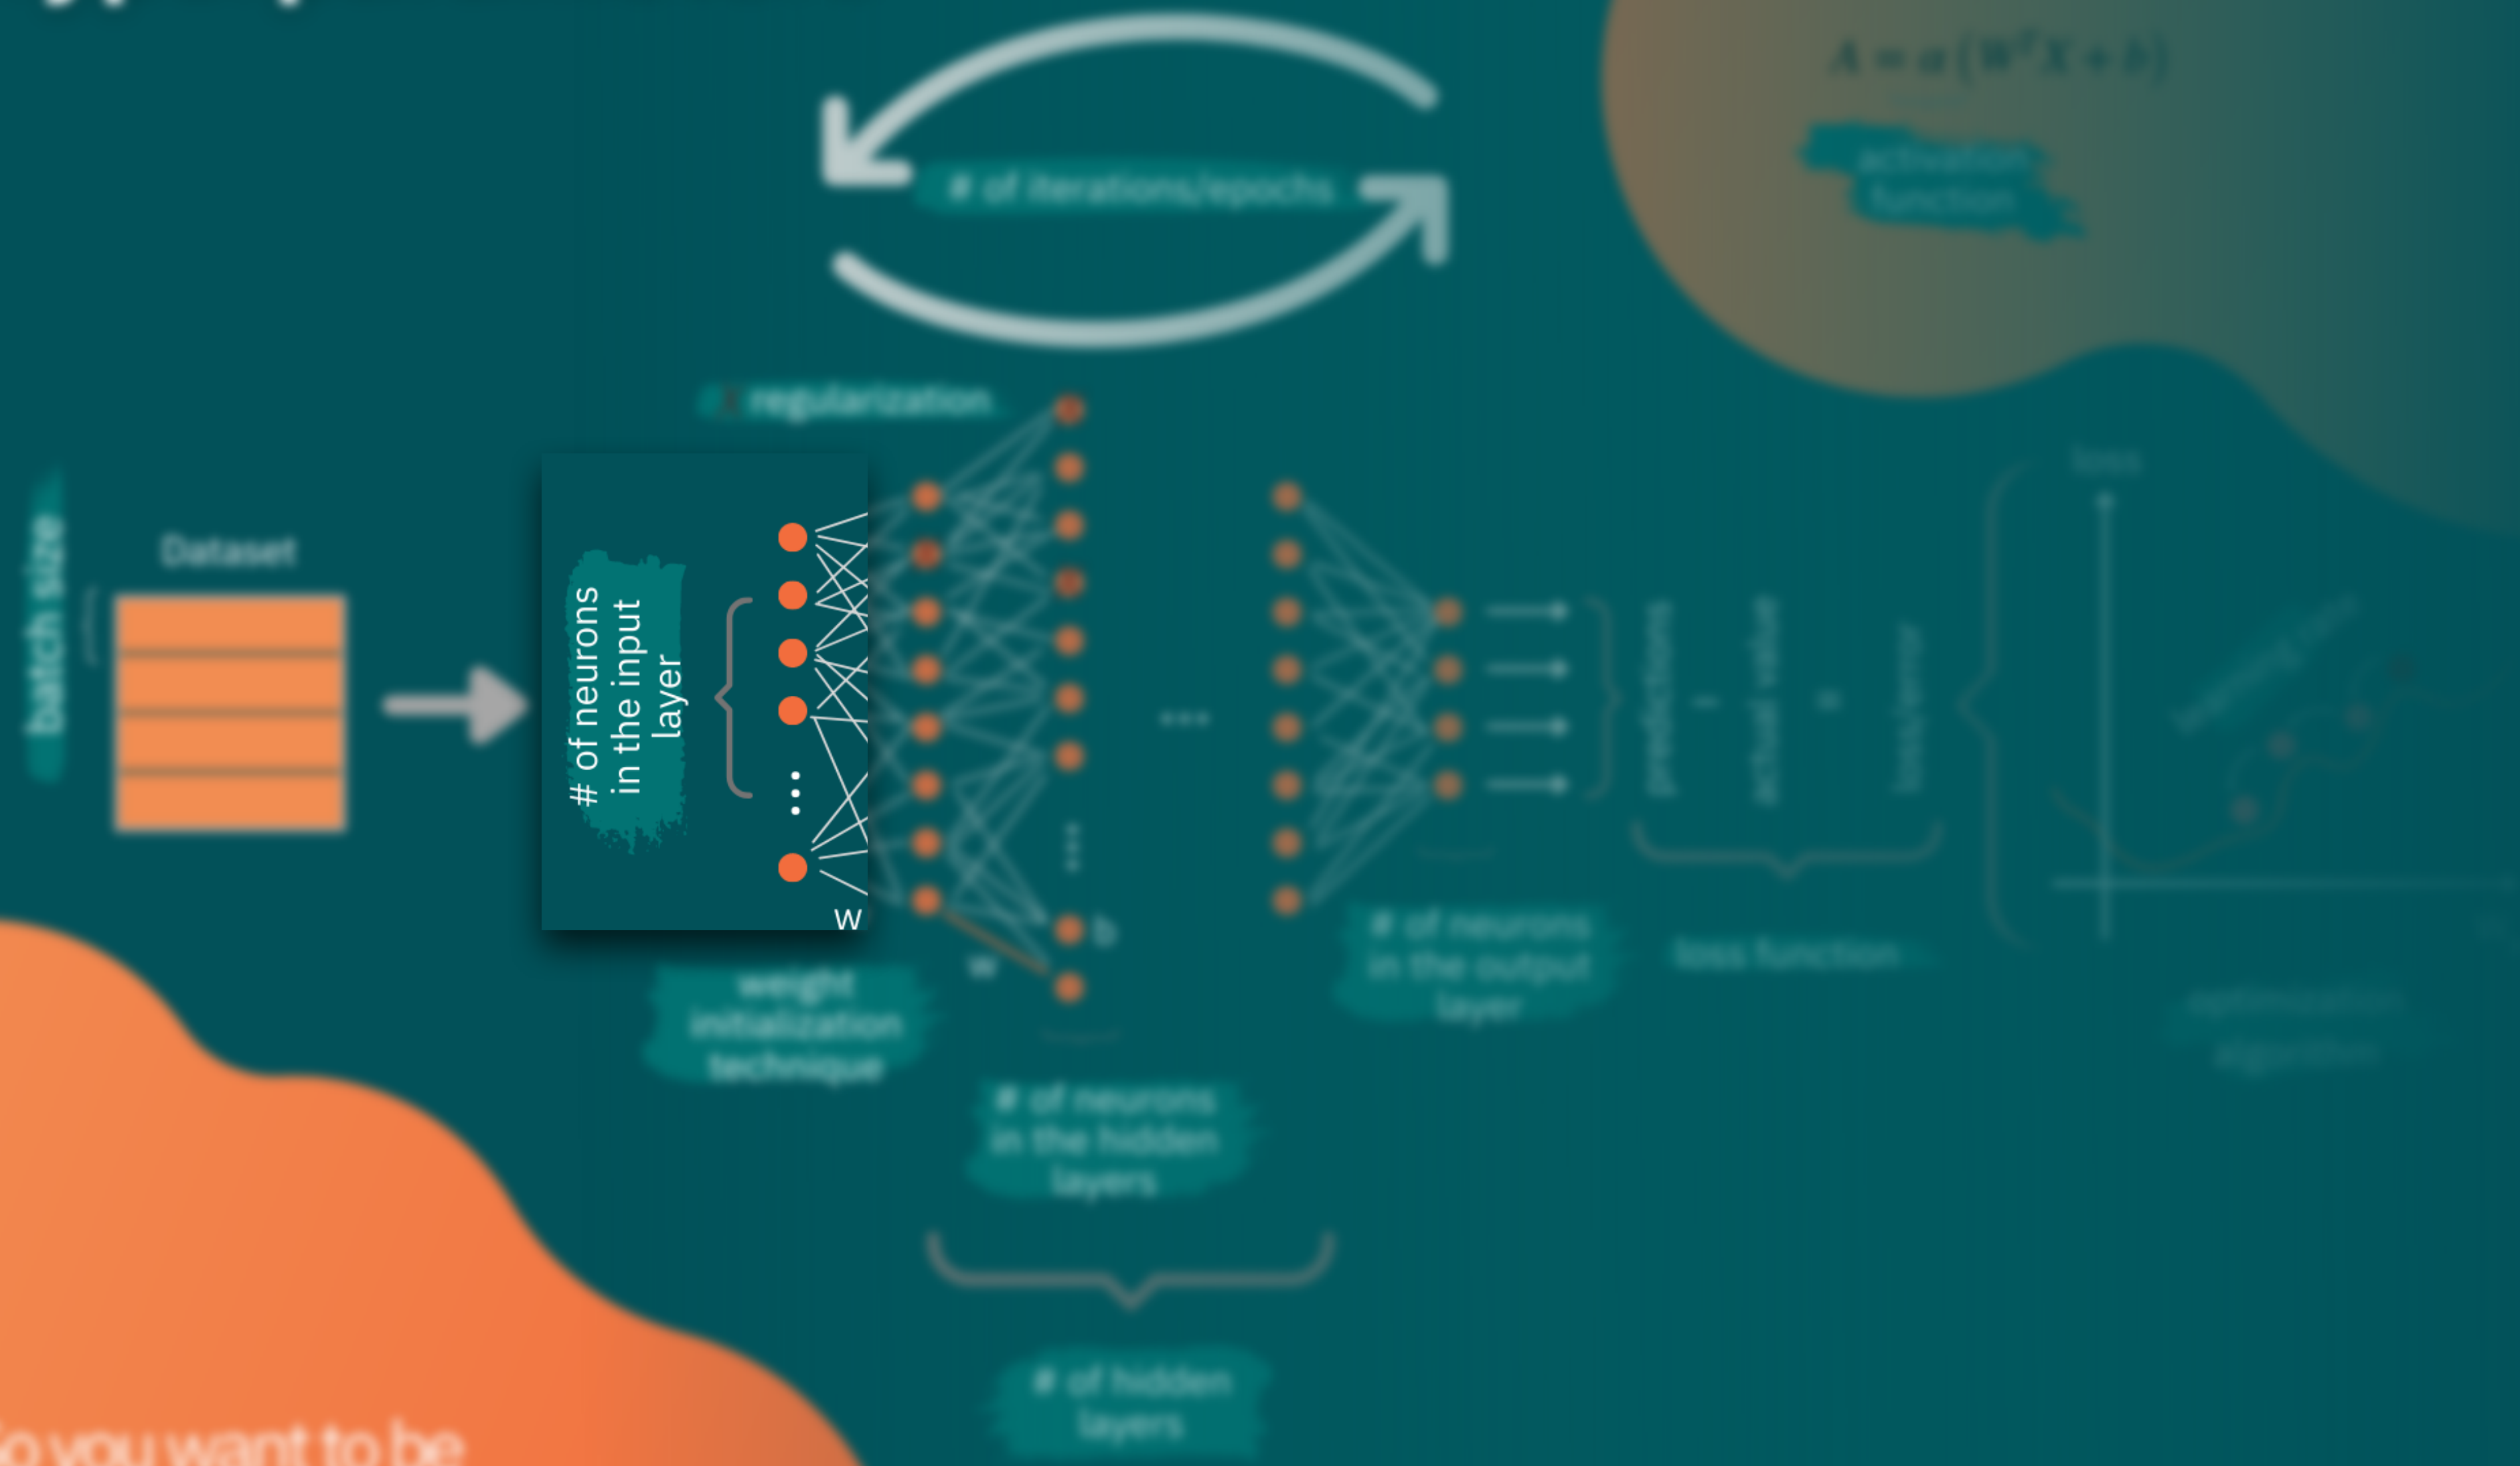

Pre-determined hyperparameters

- Number of neurons in input layer
- Number of neurons in output layer

Hyperparameters that need tuning

- Number of hidden layers
- Number of neurons in hidden layers
- optimizer
- learning rate
- activation functions
- batch size
- number of iterations
- Loss function
- *Weight initialization technique*
- *Regularization / no regularization (+which reg algorithm)*

Neural Networks Hyperparameters

Calculating layer outputs:
 $A = a(W^T X + b)$
activation function

So you want to be
a data scientist?

Number of neurons in input layer are determined based on input size

Number of neurons in input layer are determined based on input size

Number of neurons in input layer are determined based on input size

$28 \times 28 = 784$ input neurons

Number of neurons in input layer are determined based on input size

#	Number	△ Digimon	△ Stage	△ Type
1		Kuramon	Baby	Free
2		Pabumon	Baby	Free
3		Punimon	Baby	Free
4		Botamon	Baby	Free
5		Poyomon	Baby	Free
6		Koromon	In-Training	Free
7		Tanemon	In-Training	Free
8		Tsunomon	In-Training	Free
9		Tsumemon	In-Training	Free

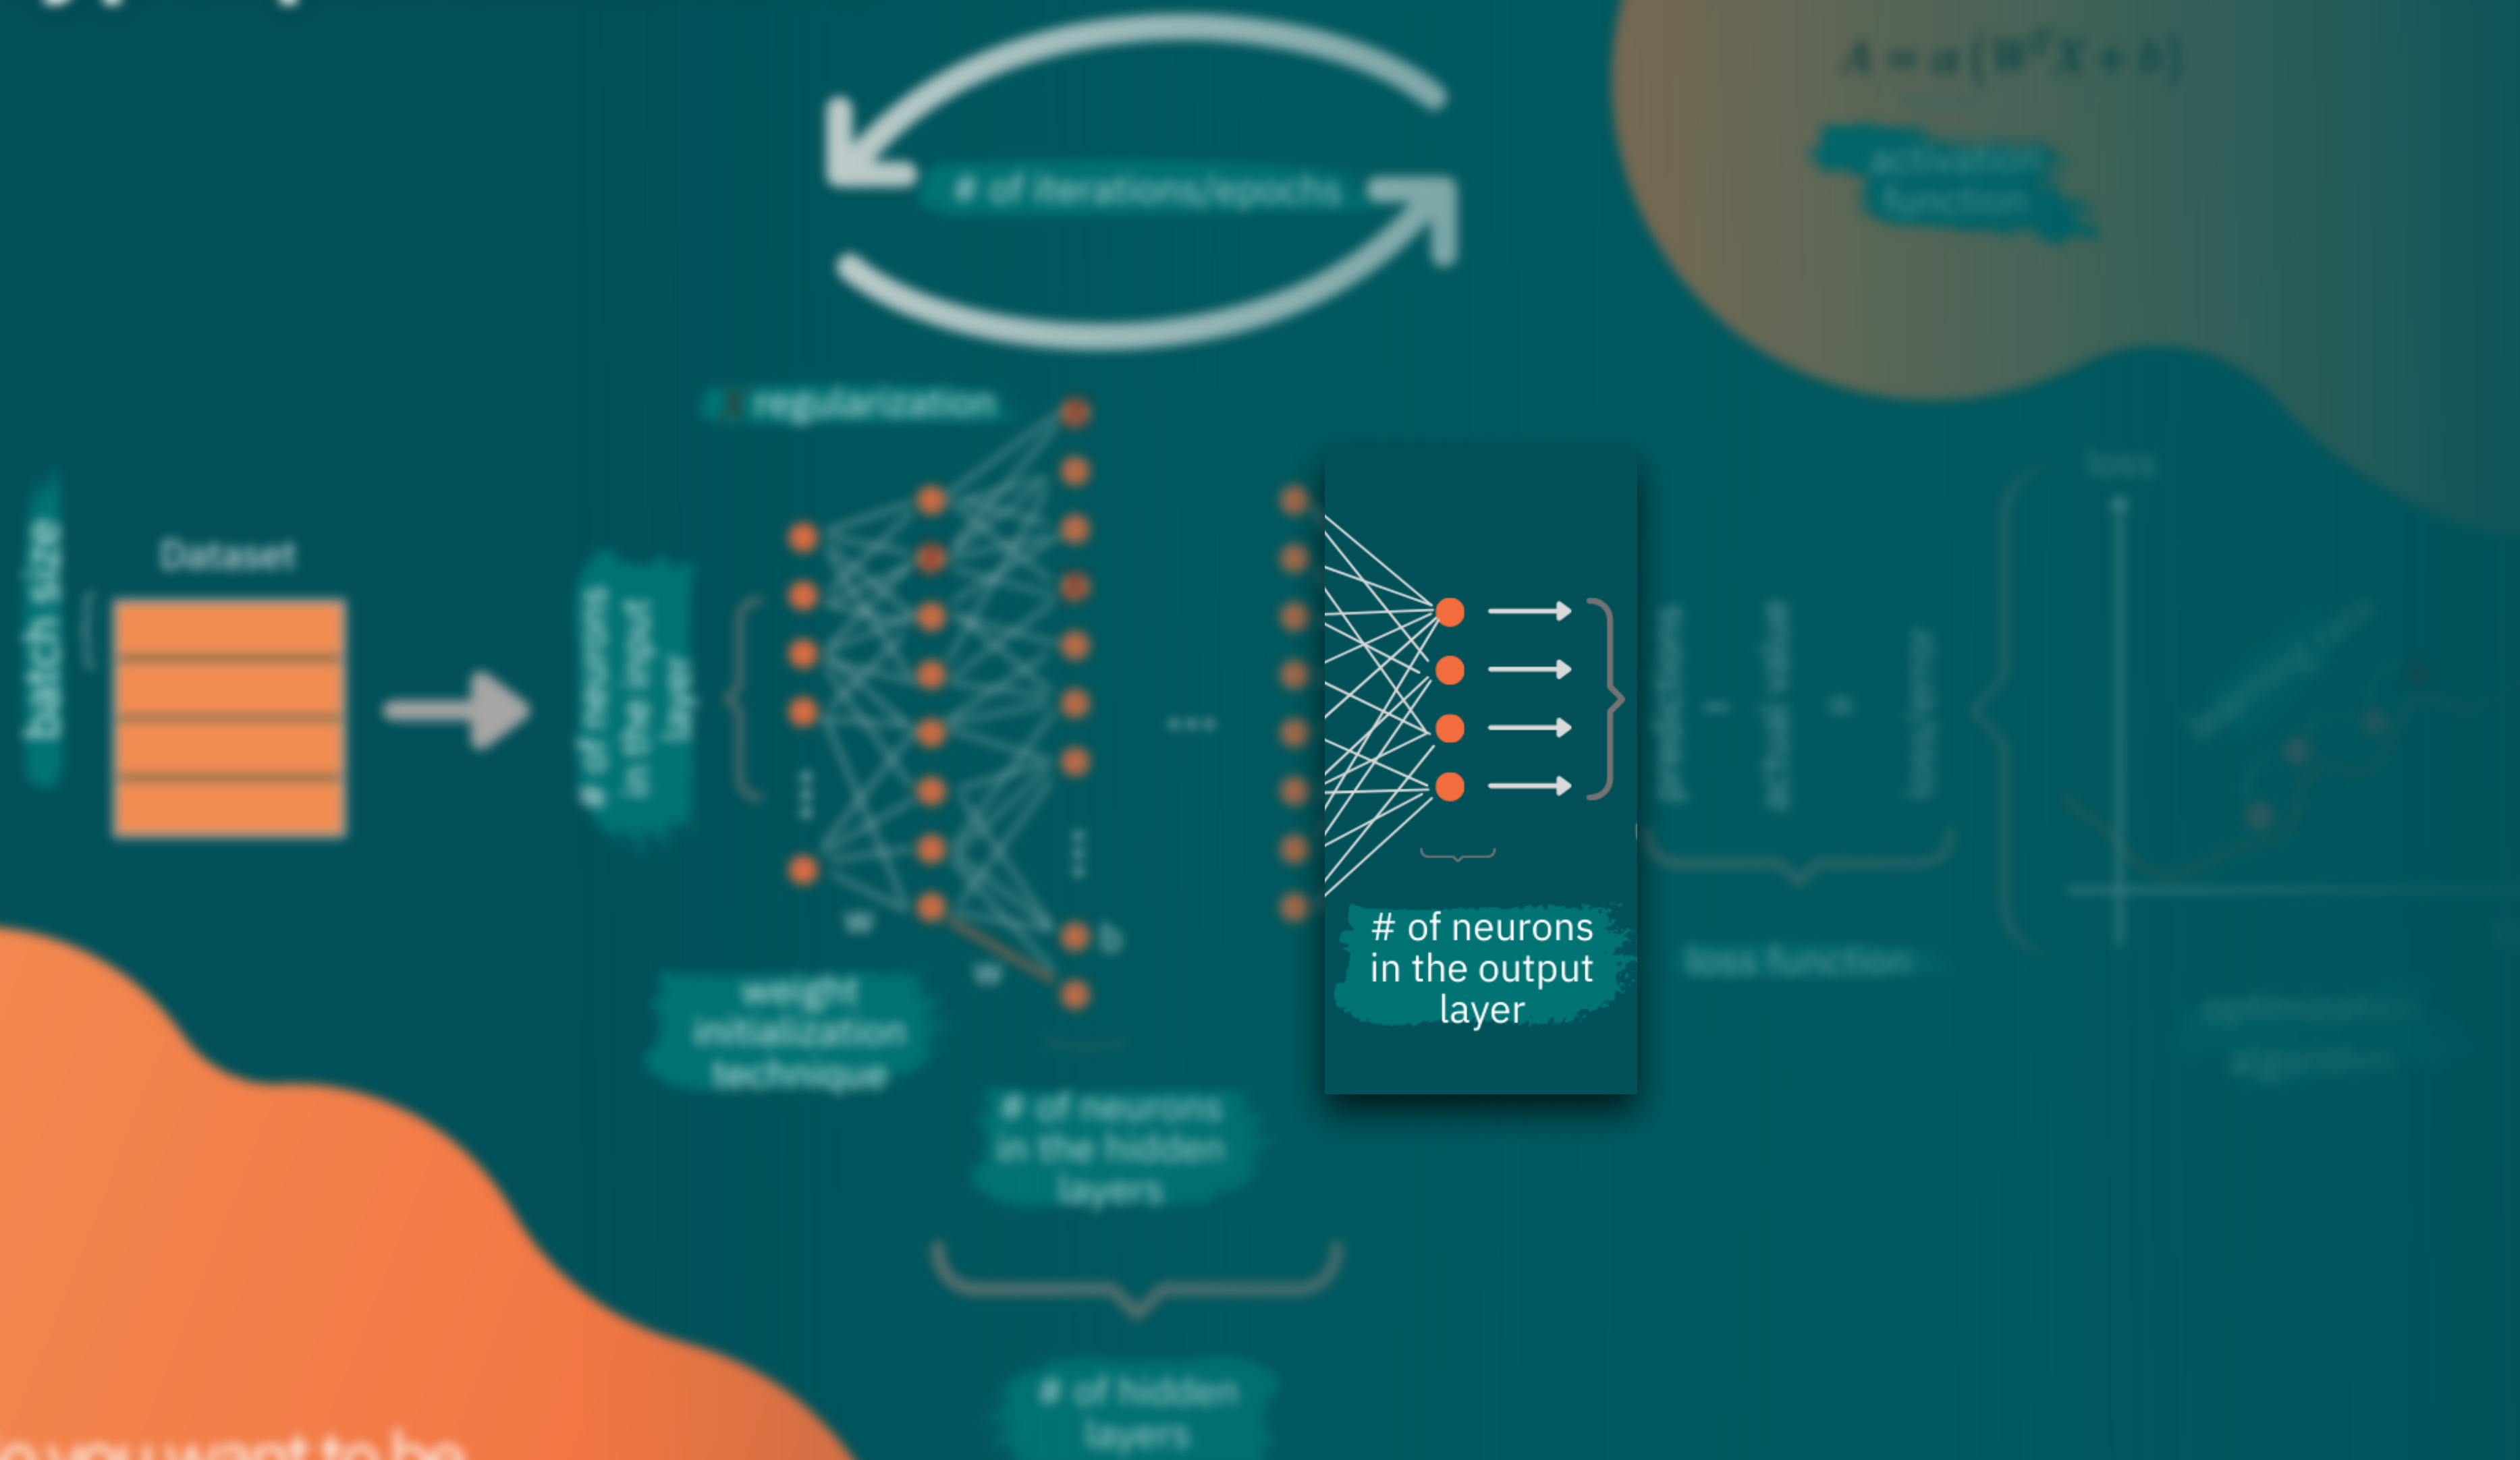

Number of neurons in input layer are determined based on input size

#	Number	△ Digimon	△ Stage	△ Type
1		Kuramon	Baby	Free
2		Pabumon	Baby	Free
3		Punimon	Baby	Free
4		Botamon	Baby	Free
5		Poyomon	Baby	Free
6		Koromon	In-Training	Free
7		Tanemon	In-Training	Free
8		Tsunomon	In-Training	Free
9		Tsumemon	In-Training	Free

4 input neurons

Neural Networks Hyperparameters

So you want to be
a data scientist?

Number of neurons in output layer are determined based on the output type

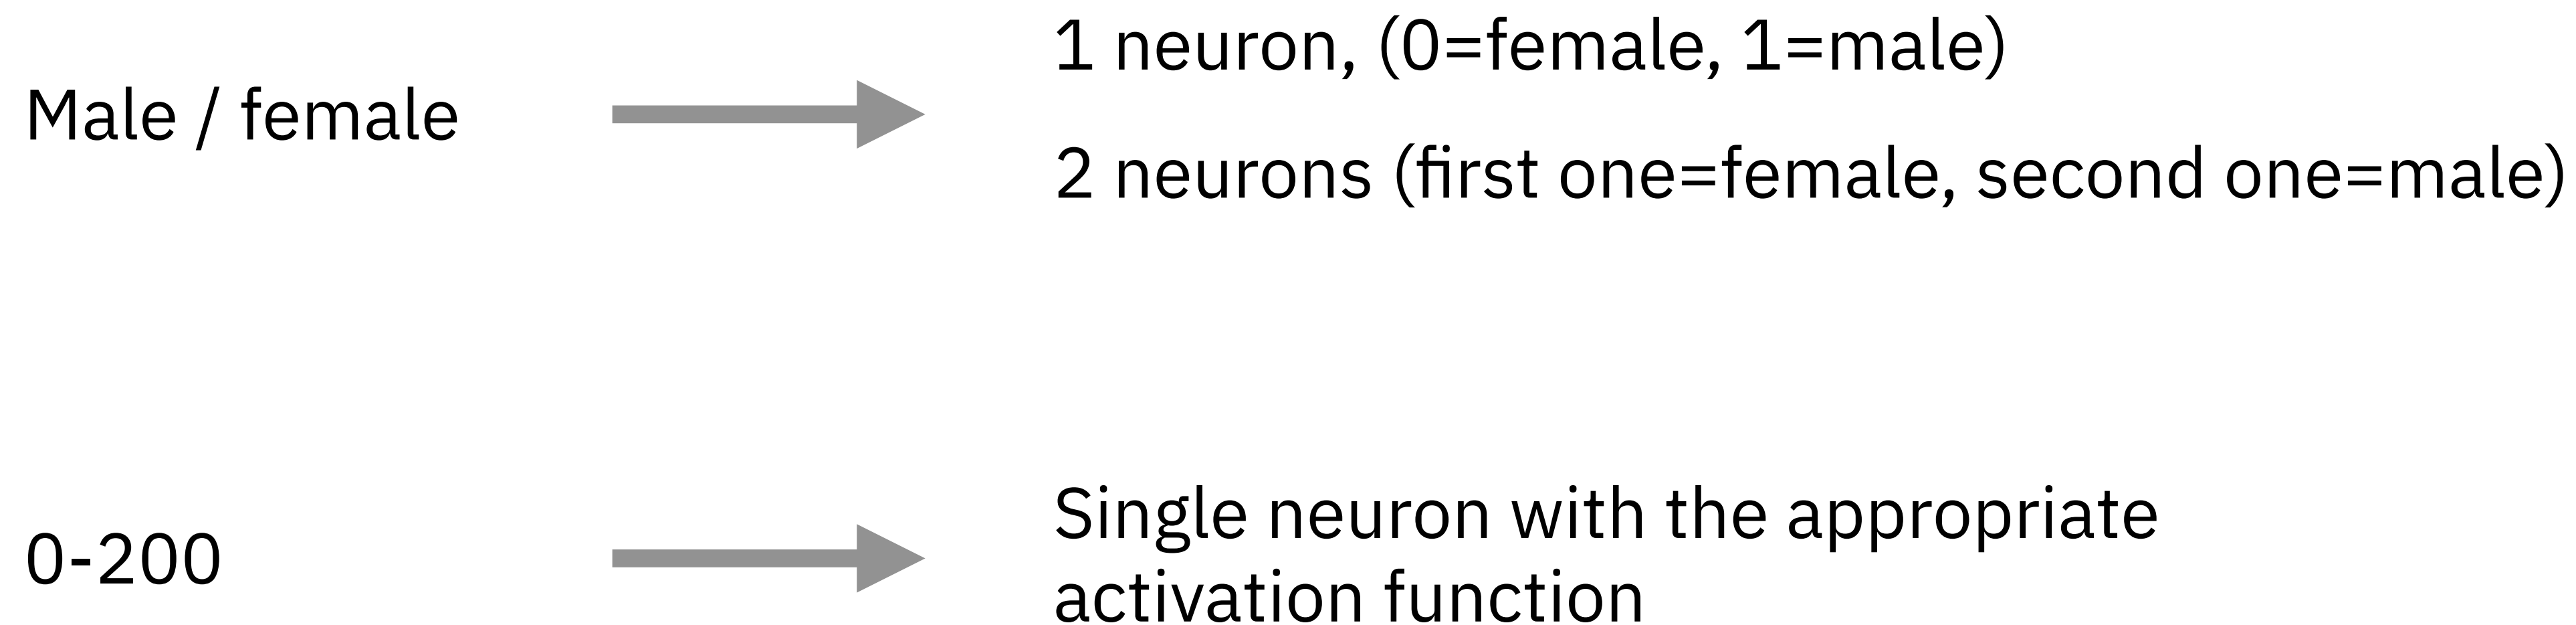

Male / female

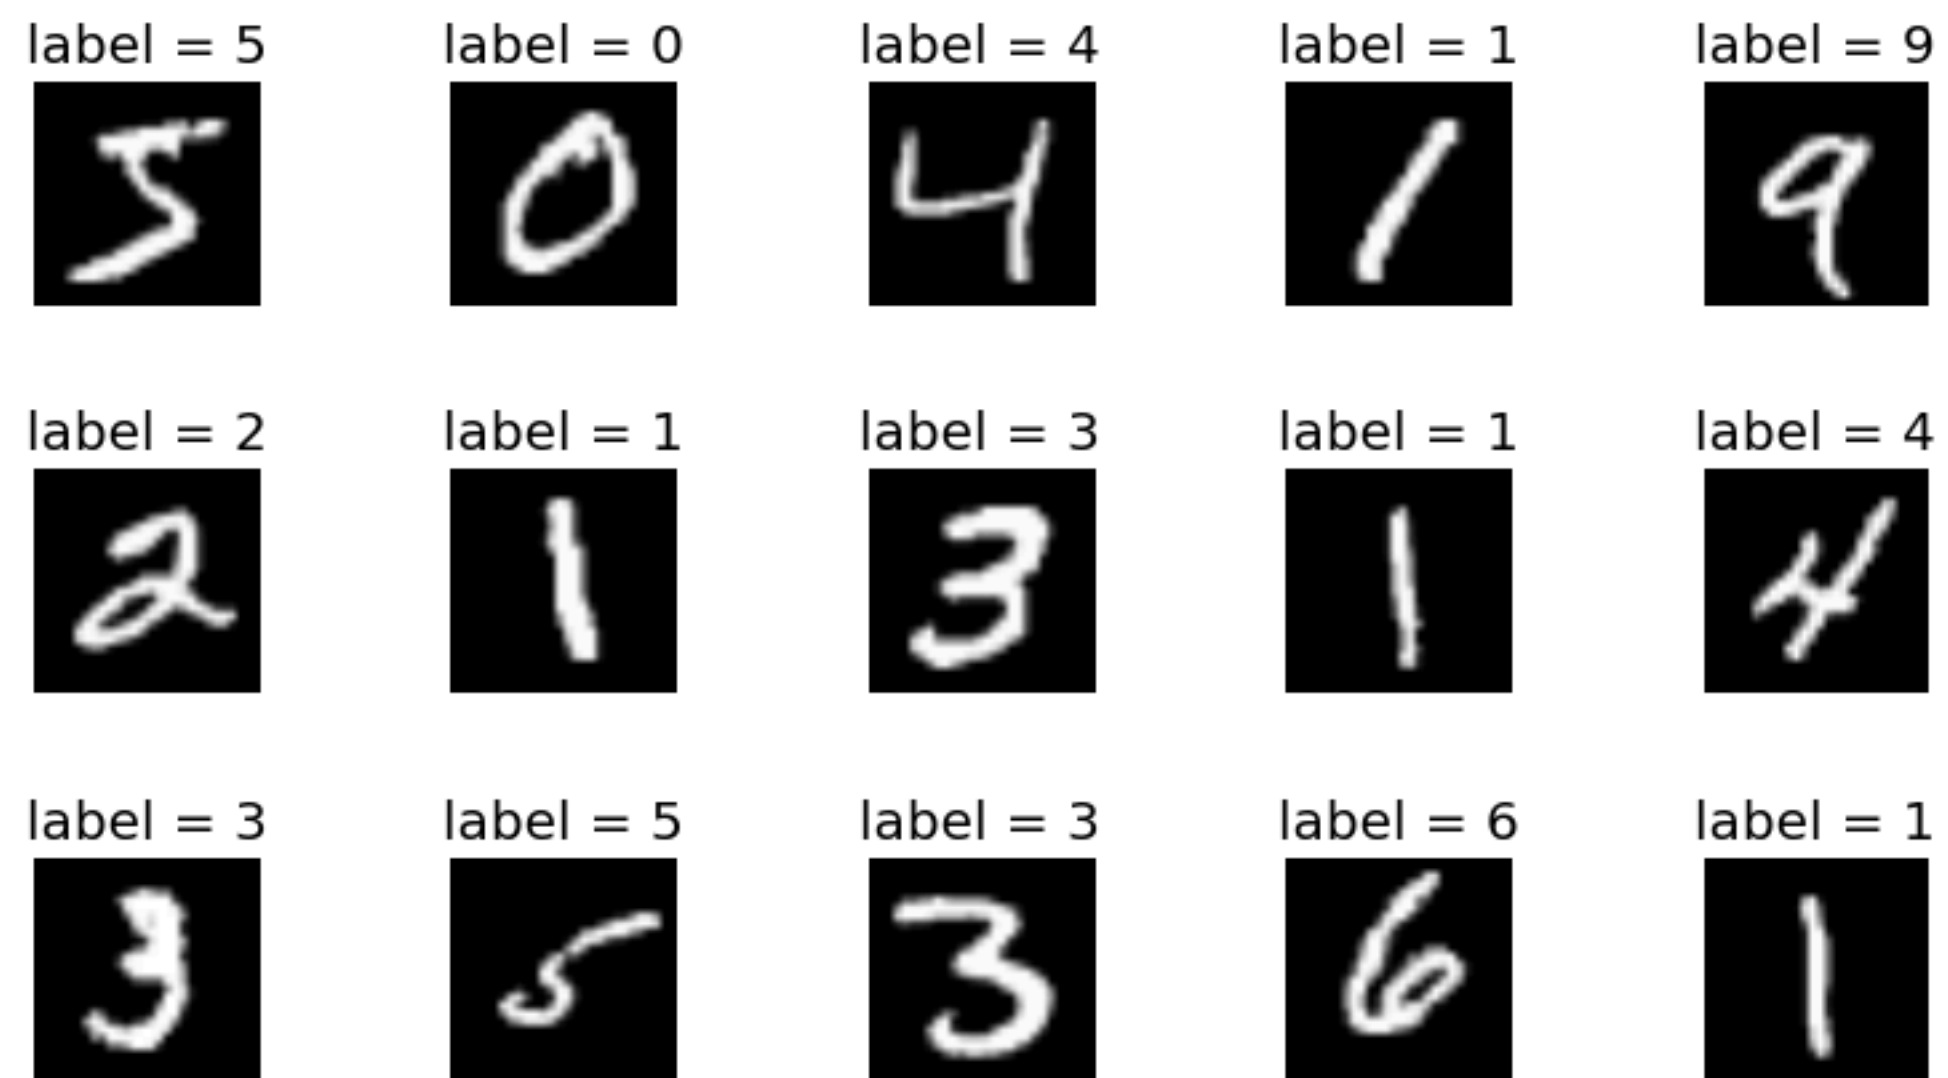

1 neuron, (0=female, 1=male)

2 neurons (first one=female, second one=male)

Number of neurons in output layer are determined based on the output type

Number of neurons in output layer are determined based on the output type

10 output neurons

Neural Networks Hyperparameters

Hidden layers

- It's better you have deeper network than wider network
- Layers learn features at different complexity
- 1-2 layers should be enough for many problems
- Start with 2 and work your way up

So you want to be
a data scientist?

Neural Networks Hyperparameters

Loss function

- How the error is calculated
- Some options are:
 - MSE
 - MAE
 - Binary cross-entropy
 - Sparse categorical cross-entropy

So you want to be
a data scientist?

Refer to course
summary

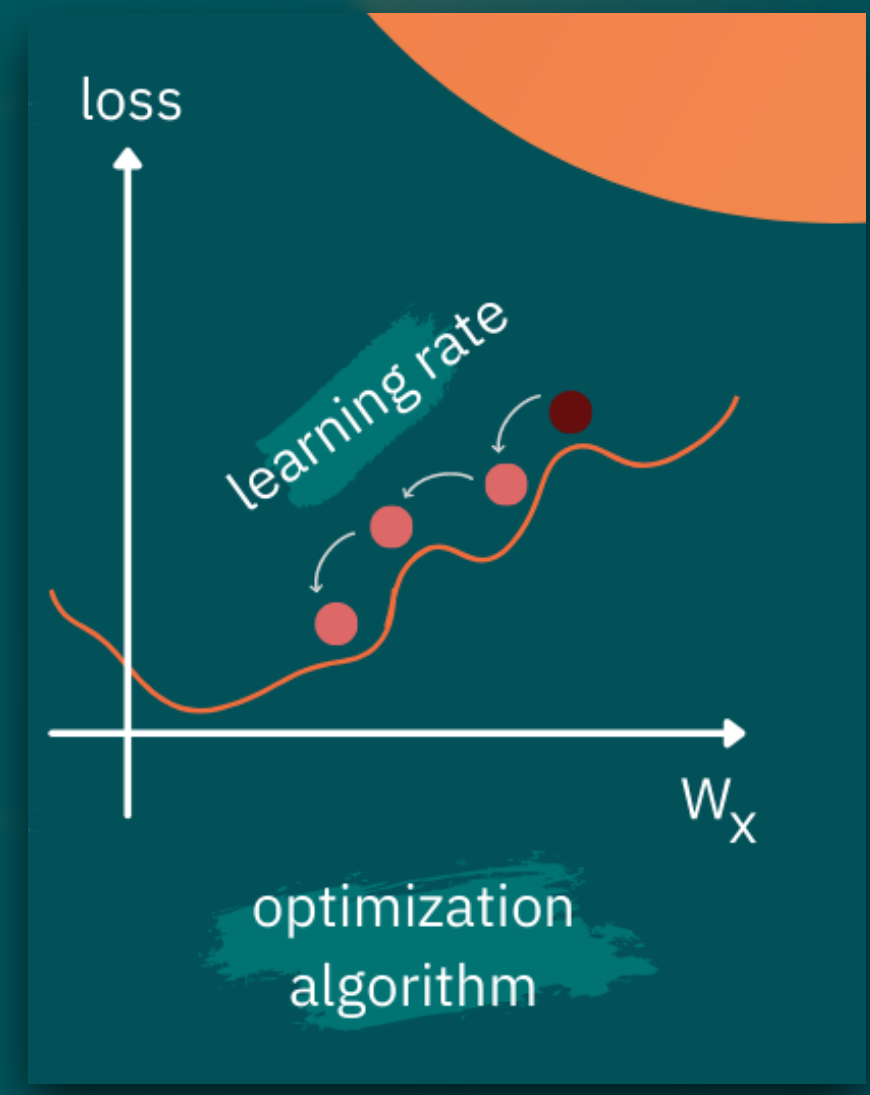

Neural Networks Hyperparameters

Calculating layer outputs:

$$A = a(W^T X + b)$$

activation function

So you want to be
a data scientist?

Choosing an optimizer

How we decide to update the weights and biases

Some other optimizers:

- SGD
- RMSProp
- Adam

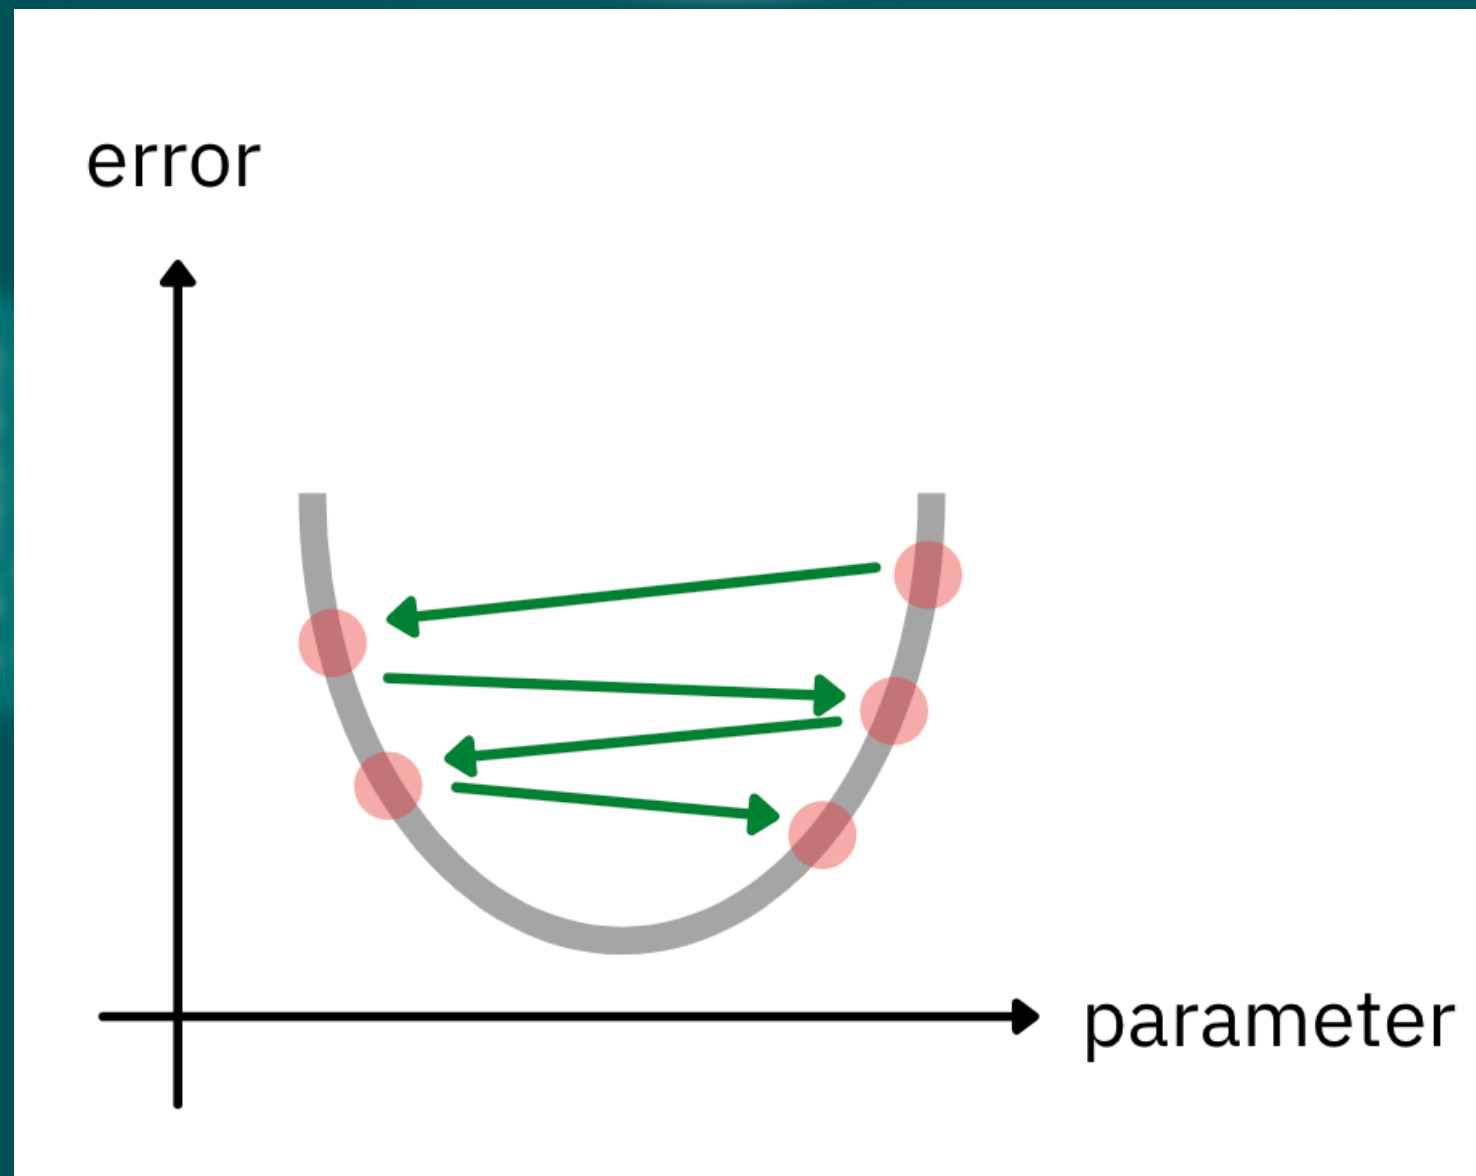

So you want to be a data scientist?

Neural Networks Hyperparameters

Calculating
layer outputs
 $A = a(W^T X + b)$
activation
function

So you want to be

activation
function

of neurons

So you want to be
a data scientist?

of hidden
layers

Neural Networks Hyperparameters

Calculating
layer outputs:

$$A = \alpha(W^T X + b)$$

activation
function

Activation function

- ReLU is a good one to start with
- Output layer's activation function will depend on the output we want to get

So you want to be
a data scientist?

Neural Networks Hyperparameters

Batch size

- Batching means separating data into smaller pieces
- Processors can run through them more quickly
- Helps with generalization

You will hear it used with Gradient Descent:

- Batch GD
- Mini-batch GD
- Stochastic GD

So you want to be
a data scientist?

Neural Networks Hyperparameters

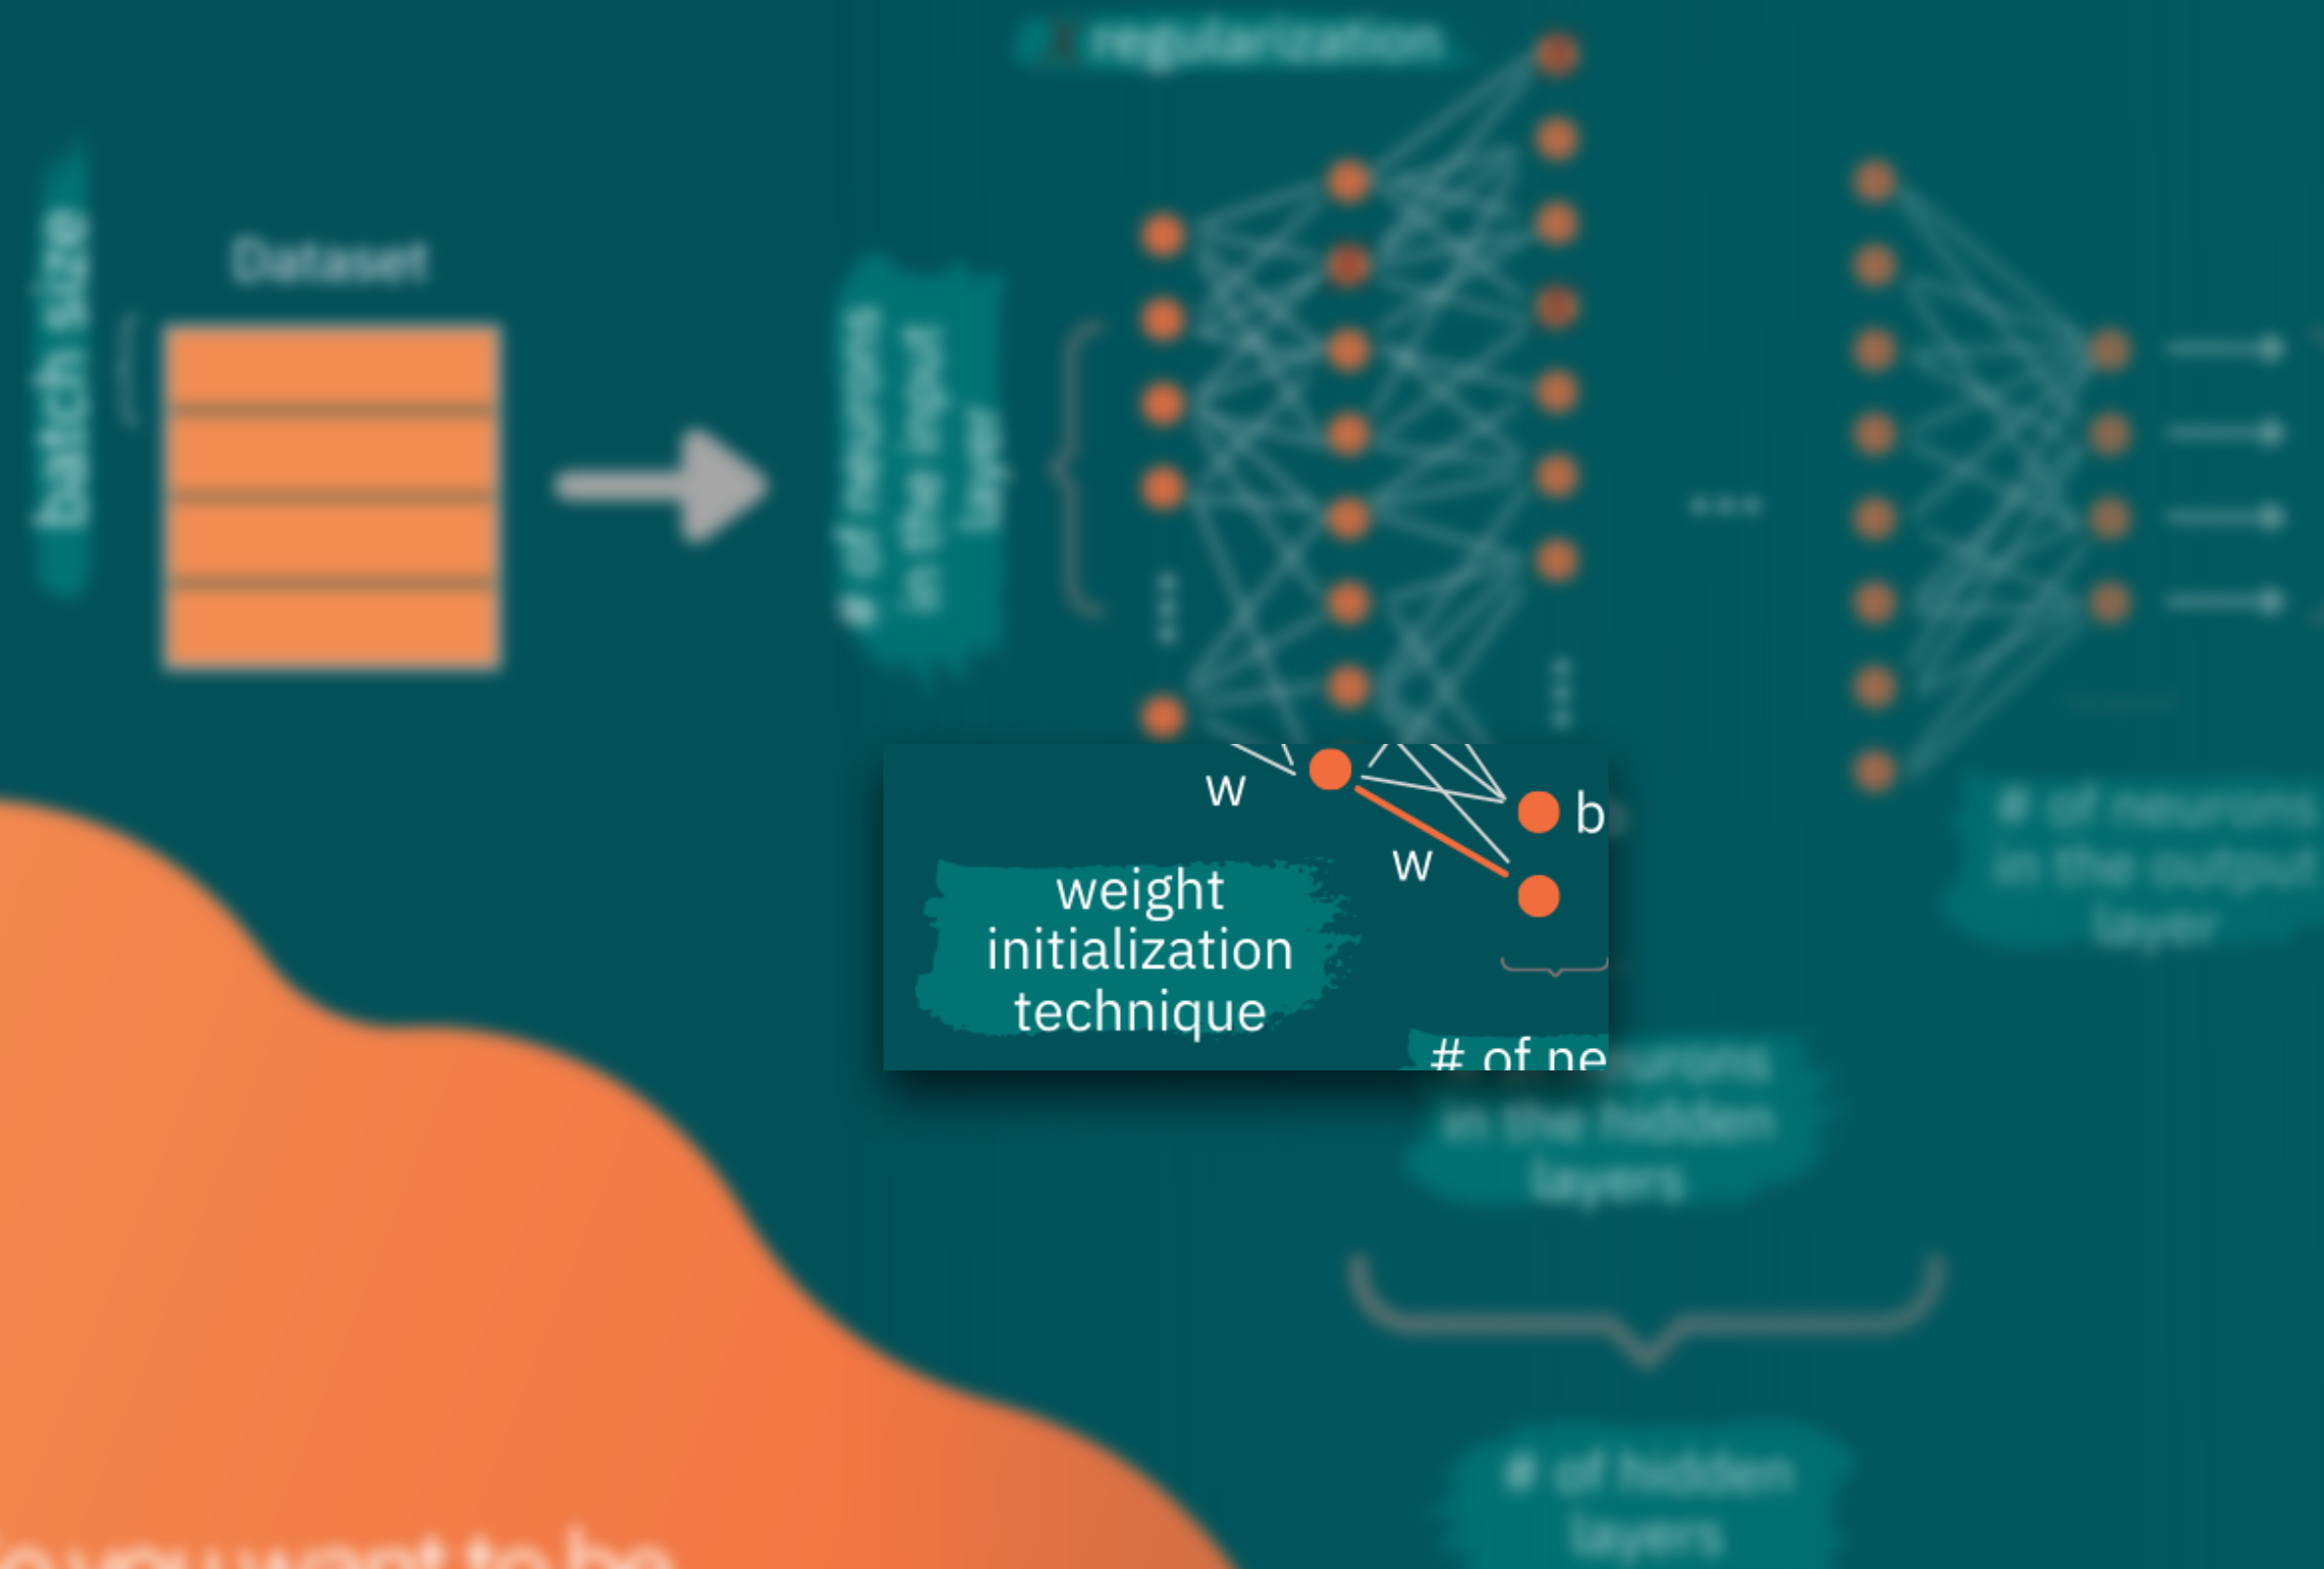

of iterations (epochs)

- You can decide this based on your model's performance
- Early stopping is a way to determine the optimal number

So you want to be
a data scientist?

Neural Networks Hyperparameters

Weight initialization

- Weights must be initialized randomly
- Bias's are all set to zero
- Changing initialization method to have a certain variance of weights at initial state can help with unstable gradients problem

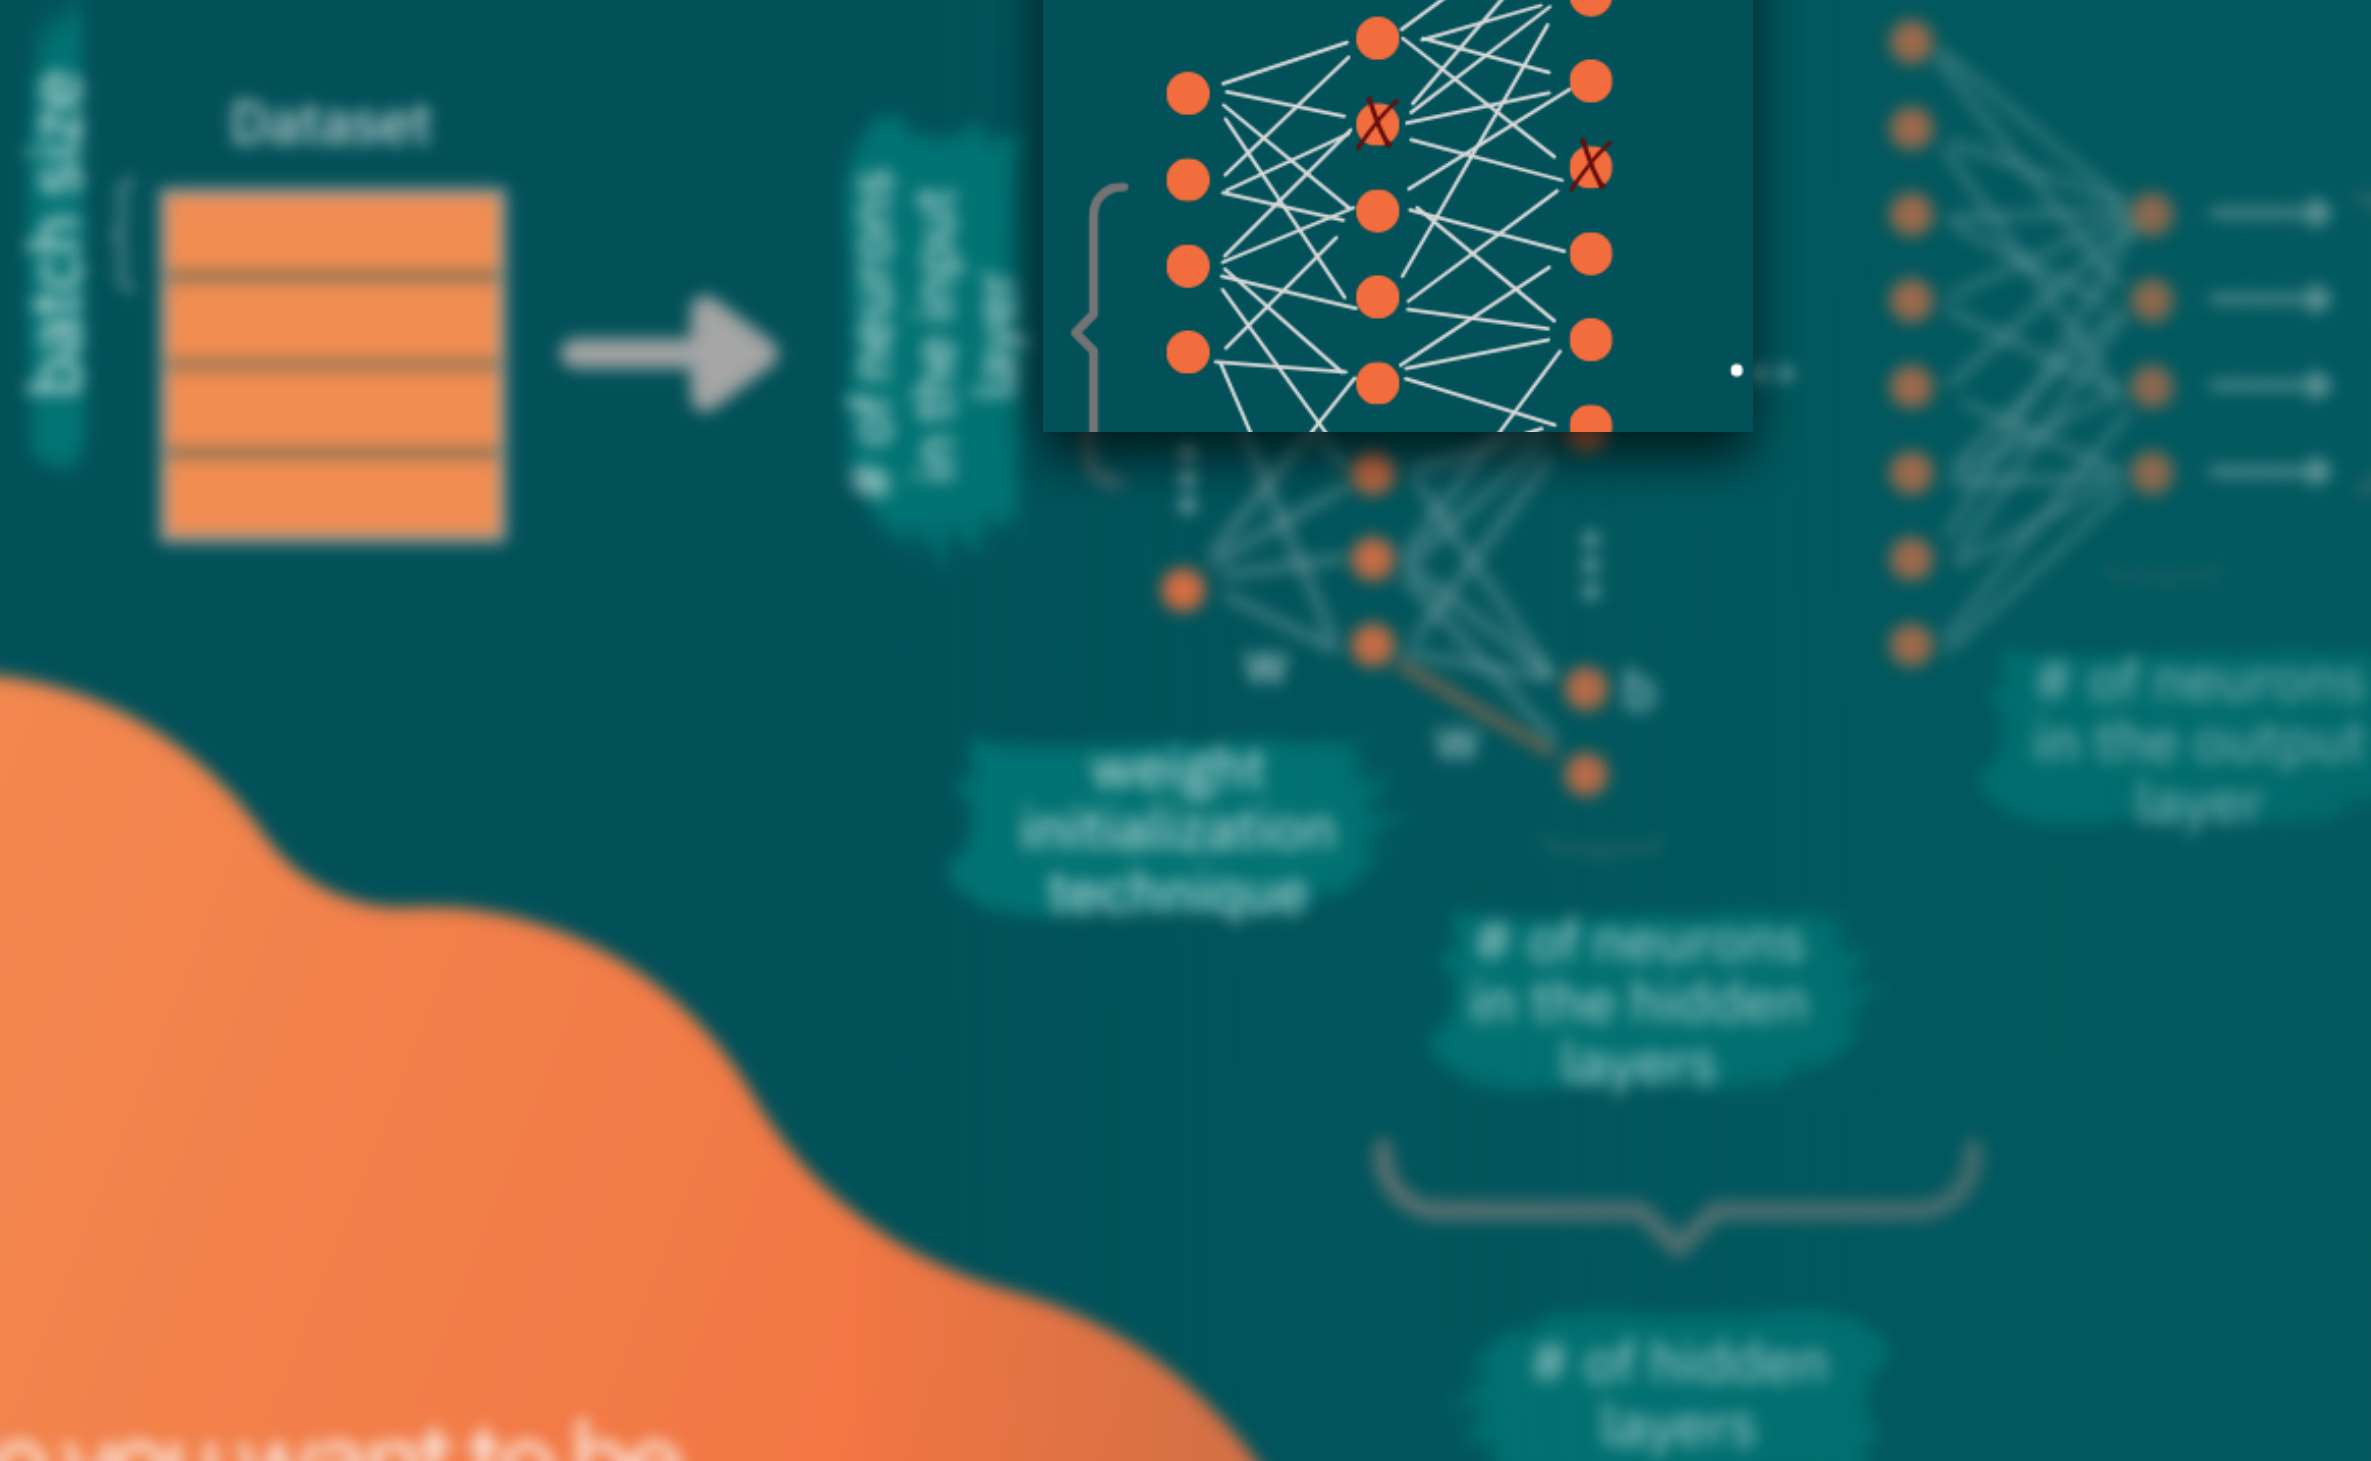

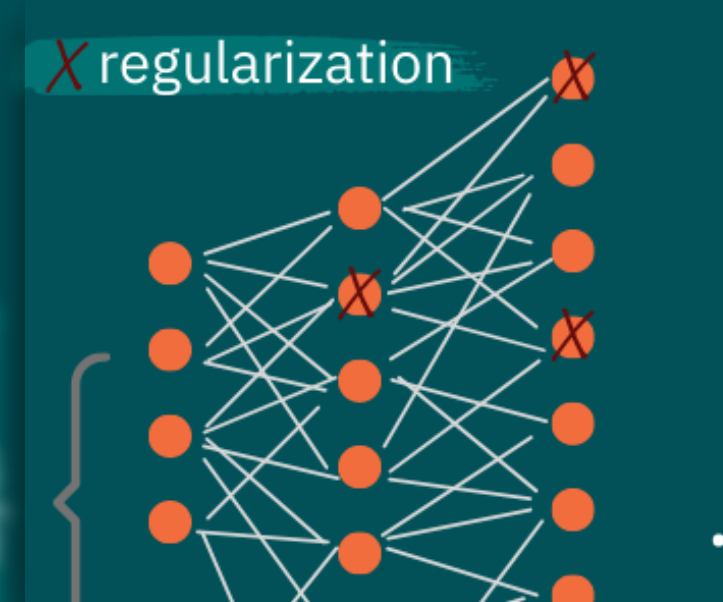

So you want to be
a data scientist?

Neural Networks Hyperparameters

Regularization

- Makes a simpler network
- We use it to deal with overfitting of Neural Networks
- Has its own hyperparameters

So you want to be
a data scientist?
