0/0	D Have blood drawn for hepatitis B antibodies.			
25. nui	A nurse is splashed in the face by body fluid during a procedure. Prioritize the rses actions, listing the most important one first.			
A. (	Contact employee health			
В. (	Complete an incident report			
C. V	Wash the exposed area			
D. I	Report to another nurse that she is leaving the immediate area.			
0/0	(A) 1, 2, 3, 4			
0/0	B 2, 3, 4, 1			
0/0	3, 4, 1, 2			
0/0	D 4, 1, 2, 3			

rec		e patient suddenly develops hives, shortness of breath, and wheezing after g an antibiotic. Which antibody is primarily responsible for this patients e?
0/0	A	IgA
0/0	В	lgE
0/0	C	lgG
0/0	D	lgM
27. imr		nat type of immunity is provided by intravenous (IV) administration of oglobulin G?
0/0	A	Cell-mediated
0/0	В	Passive
0/0	C	Humoral
0/0	D	Active
28. <u>im</u> r	Wł <u>muni</u>	nich of the following circumstances would cause a client to develop <u>active</u>
0/0	A	Becoming ill with tetanus and receiving tetanus toxoid
0/0	В	Having chickenpox
0/0	C	Receiving a rabies shot after being bitten by a rabid dog
0/0	D	Receiving an injection of gamma globulin
tha	a lo t this	nen the patient complains of vague symptoms of malaise and fatigue and w grade fever, but has no other specific signs of illness, the nurse suspects spatient is in the prodromal phase of infection (the time immediately before ess is diagnosed).
The	nur	se should include in the plan of care to:
0/0	A	assessments for specific signs of illness
0/0	B	increase fluid intake.
0/0	C	place the patient in isolation.
0/0	D	report findings to the Infection Preventionist Officer.

30. de1	A patient has a nursing diagnosis of Infection, related to inadequate primary fenses, as evidenced by surgical incision and intravenous (IV) line access.		
An	appropriate nursing intervention for this patient is to:		
0/0	A assess and document skin condition around the incision and IV site at each shift.		
0/0	B limit visitors to immediate family to decrease exposure to infection.		
0/0	c require the use of a face mask by nursing staff when they are providing care.		
0/0	D maintain clean technique in the change of wound dressing and IV site.		
	What instructions is the most important for the nurse to give a client who is out to be discharged and has a surgical wound?		
0/0	Adjust the diet so it contains more fruits and vegetables.		
0/0	B Apply lubricating lotion to the edges of the wound.		
0/0	C Notify the physician if with any edema, heat, or tenderness at the wound site.		
0/0	D Thoroughly irrigate the wound with hydrogen peroxide.		
32. The nursing intervention most likely to decrease the chance of health care-associated infections (HAIs) for a 76-year-old patient following bowel resection surgery would be to have the patient:			
0/0	A turn, cough, and deep-breathe every 2 hours.		
0/0	B limit ambulation.		
0/0	© get blood pressure, pulse, and respirations assessed every 4 hours.		
0/0	(D) keep the room door closed.		
33. ind	The nurse observes a patient demonstrating wound cleaning. What action licates the need for further instruction?		
0/0	A Using sterile gloves to perform the cleaning		
0/0	B Applying an antiseptic to the area		
0/0	C Cleaning the area from the outside in		
0/0	D Washing hands with soap		

34. Question: The RN has just been stuck with a syringe while dropping it into a sharps container that was too full in a clients room. Which of the following steps should be taken first for a puncture?
