

Overview: Advanced Treatments

In this unit we're going to cover advanced treatments like immunotherapies and targeted treatment options. And at the end Michelle is going to talk to you about how you can gain access to them and how you can get them incorporated into your treatment plans. As always, if you have questions drop them in the chat below. If you're interested in Part 2 of the course; the units where we go over Self Advocacy, Self Care, How to Make the Health Care System Work for You and Personalized Treatment Plans and How to Create Them as well as Advanced Treatment Monitoring, put your questions and desires in the chat below as well. It's going to help us when we're developing this content. The more feedback you give us and the more requests, the more robust content and course information we can create for you. We really hope this course has been useful and helps you in your cancer journey. And I hope this last unit is particularly impactful and supportive.
