

How to Find Any Note on Any String

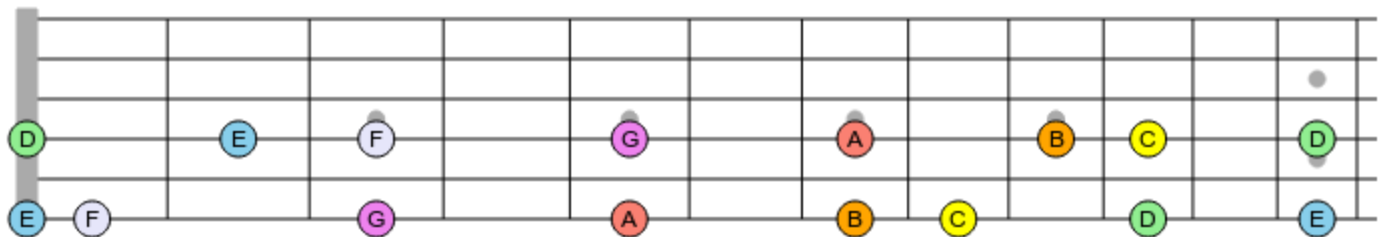

Step 1: Memorize the natural notes on the low E (6th) and A (5th) strings. These are the roots of all your barre chords and power chords, so harness any knowledge you may have from those worlds.

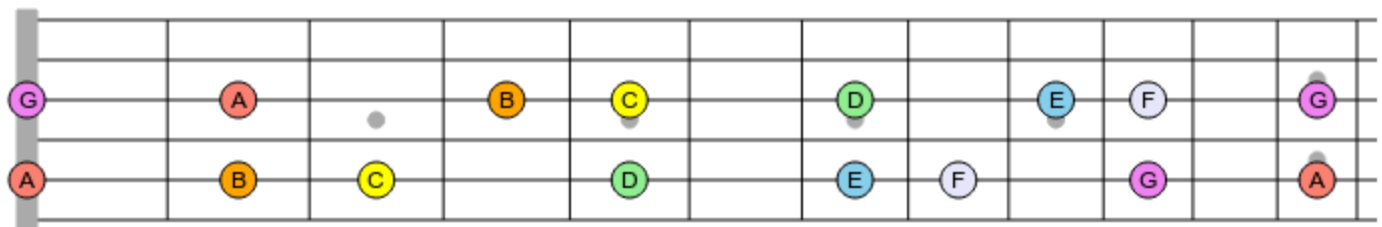

Step 2: When you know the notes on the low E string, you also know the notes on the high E (1st) string.

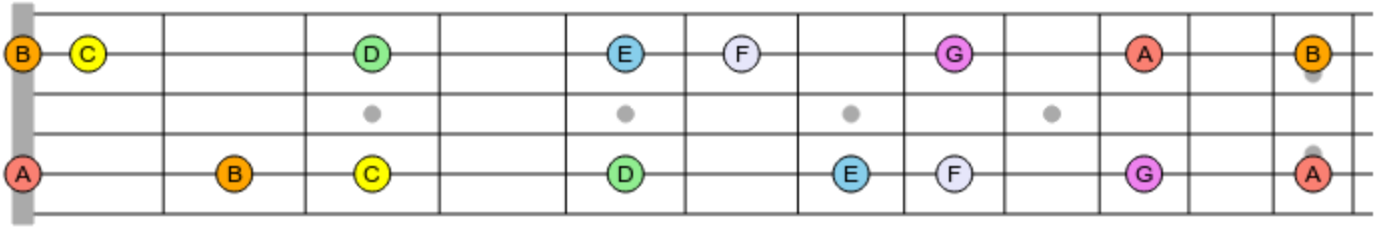

Step 3: Use octave shapes from the low E string to name notes on the D (4th) string.

Step 4: Use octave shapes from the A string to name notes on the G (3rd) string.

Step 5: Use octave shapes from the A string to name notes on the B (2nd) string.

Step 6: Fill the gaps by applying a sharp (#) to move a note one fret higher or a flat (b) to move a note one fret lower.
