

Answer Key

Question Number	Question	Answer
1	Groovy is largely compatible with the Java language. Does this mean that Groovy compiles compatible Java code in exactly the same way as the Java compiler, without any side effects?	No, Groovy is mostly compatible with the Java language syntax, but due to different design choices by the Groovy team, the class may not behave exactly the same as the same class that was compiled by a Java compiler.
2	What will be the content of the msg1 variable? <code>def name1 = 'reader'</code> <code>def msg1 = "hello, \$name1"</code>	"hello, reader"
3	What will be the content of the msg2 variable? <code>def name2 = "reader"</code> <code>def msg2 = 'hello, \$name2'</code>	"hello, \$name"
