

Weekly Challenge

Sample Data

Primary Challenge

Create a Class Library for creating sample data. Create methods to create random booleans, ints (in a range), and names (first and last based off of names from text files).

Bonus Challenge

Add random doubles (in a range), random phone numbers (in the (xxx) xxx-xxxx format), and random zip codes (in the xxxxx-xxxx format). Support other numeric-style formats without additional methods.

“Practice makes the master.”
