Design Beautiful Pages

Lesson 04-01: Creative Team Inspiration

Here's a look at some of the great ways our Creative Team took the Line of Beauty principles and applied them to their scrapbook pages.

I've divided up the Creative Team pages into the four categories of lines I taught in the Line of Beauty lessons, starting with Traditional Line pages. This page by Paula is a perfect example of a traditional line page. The photos are the same size and are lined up evenly in a row one after the other. Traditional pages don't have to be boring, though. On this page Paula did a terrific job of adding paper and elements to add visual interest to her page!

Most of the CT pages weren't traditional pages, however. Many of them were non-traditional, meaning they formed a line, but the photos weren't perfectly lined up like this cute page by Kathy.

This page, also by Kathy, has photos in a line that are different heights.

And this page by Paula uses layer masks plus a frame over one.

Penny's line of photos are stacked vertically but tipped slightly for added interest. I love how she used a large photo for most of the background and then added some cute paper and elements along the side!

We also talked about filling in a section of a line with journaling or elements to keep the line looking connected. Donna did a great job doing that with her Delhi page.

The last line category we talked about was an implied line. This uses one photo and then adds papers and/or elements to fill in the appearance of a line. Danica's pretty page did a great job with that and demonstrates how you can use patterned paper with this line technique.

Deborah's page is also a great example of creating a line effect with only one photo. I love how spare and solid this page looks—perfect for a picture of three young men!

Deborah used paper on either side of her photo to create the line effect. Even though she put painted word art over her 3D photos and papers, she made sure the drop shadow shows through, as it should with paint. I also like the diagonal flow of elements that crosses her main line.

And finally, here's an implied line page by Terri that does a wonderful job of making your eye see a line with just one photo. This is a great way to add journaling and fun elements and paper to your page.

Thank you Creative Team for inspiring us to go out and create some Line of Beauty page designs!
