Digital Scrapper Quick Tip | Adjust Color

Add Warmth to an Element

by Jenifer Juris

Quickly give an autumn touch to an element by adjusting the color balance to warm it up.

Quick Tips for Adding Warmth to an Element:

• Duplicate any element to protect the original. In the Menu Bar, choose Image > Duplicate to create a copy. In the dialog box, click OK.
• To add warmth to an element, in the Menu Bar, choose Enhance > Adjust Color > Adjust Color for Skin Tone.
• On the document, click once anywhere on the element.
• In the dialog box, click and drag the Temperature slider to the right until the element has the amount of added warmth you're looking for.
• Click OK to close the dialog box.

Will this work on all elements?

• Technically, yes. You can use this technique on any element.
• But, not all elements need warming up.
• Elements that have a very cool temperature, (deep blues and purples) will not work well.
• The white areas will look yellow so try to avoid white elements or elements with white in them.

Make It Match Class:

To learn more about how to recolor elements, my class Make It Match can be found **HERE**.
