

First Mate Product Knowledge

Waxperts First Mate Range

The First Mate range was formulated a male client in mind. For a client whose hair is typically quite strong, coarse and sometimes difficult to wax, all while their skin type when waxing, is generally quite reactive and sensitised.

We quickly realised that this range is not only great for male waxing, but for ALL waxing regardless of gender. It is ideal for clients who shave and clients who naturally have a stronger, coarser hair type like redheads,

This range is perfect for experienced Waxperts to deliver wax treatments with super results for clients who would generally have a more 'difficult' hair type to wax while previously experiencing massive discomfort with other wax brands. This range allow you to give those client a comfortable and professional wax with amazing results.

Both First Mate Hot and Strip waxes are made for ALL hair and skin types.

With a masculine, woody, yet sweet fragrance of sandalwood and sweet patchouli. It is a very economical range. Applies thin resulting in less product being used.

First Mate Hot Wax

- A hot/hard wax that sets on the skin and peeled away comfortably by the therapist.
 - Applied thin like a film wax.
-
- Because of its super thin application, this wax sets quite quickly, cutting down treatment time and uses less product.
 - Used with Waxperts Pre-Wax Oil, it applies smoothly and peels away when removing causing very little discomfort to the client, making it super easy for a therapist to use.
 - This wax will still have that lower temperature feel similar to the Waxperts Original Hot Wax, which results in less heat and less redness.
 - Can be re-applied on waxed skin numerous times because of its lower temperature, there is very little heat on the clients skin and the skin is protected at all times with the Waxperts Pre-Wax Oil.
 - First Mate will also never crack or break due to its elastic-like properties.
 - For use on ALL clients but this wax works particularly well with stronger, coarser hair types. (Female - facial, underarm, and all bikini waxing including specialized waxing. Male - facial, underarm, back/chest/shoulders and all specialized waxing)
 - Waxperts First Mate Hot Wax is already broken up into chunks (no need to break with a hammer).
 - Each 1kg bag should get 12-14 Hollywood waxes when used correctly as trained by Waxperts.

Pre & Post Products

- The perfect combination for before, during and after a Waxperts wax.

Waxperts Cleanser is an antiseptic cleanser packed with essential oils including lavender (soothing & calming), chamomile (antiseptic and disinfectant) and comfrey (reduces inflammation & keeps skin healthy). This cleanser preps and conditions the skin before any wax treatments, which helps prevent skin lifting and bruising during Waxperts Strip Wax application. It can be used to cool down skin during and after waxing which is very soothing. There is zero stinging sensation when working on sensitive areas due to its gentle nature. Perfect aftercare to use when facial waxing, as the essential oils soothe, treat and protect skin post wax.

Waxperts Pre-Wax Oil is for use with Waxperts Original Hot Wax and Rosie Pearl Hot Wax. This is what makes the treatment so easy and comfortable for the client because it protects and soothes skin throughout the wax treatment. It creates a barrier between clients skin and wax, so the wax only sticks to the hair being removed. Contains essential oils including lavender (soothing & calming) and chamomile (antiseptic and disinfectant).

Waxperts After-Wax Oil is a soothing and calming body oil for use after all body waxing. It reduces any redness or discomfort very quickly after a wax treatment. There is also no 'sticky' feeling for clients post-wax when this After-Oil has been applied. This body oil has a thicker consistency as it contains a lot more lavender and chamomile essential oils, so very little Waxperts After-Wax Oil is needed. Is not suitable for face.
