Quick Start Guide

- If you need help syncing your program to the settings we use in our classes (as of 2020), watch our [Quick Start Guide](#).
- Begin in Adobe Photoshop.

Prepare Your Workspace

- Create a new 12 x 12" document (File > New) at 300 ppi with a white background.
- Press the letter D to reset the Color Chips to the default of black and white.
- Open the S1-L1-FlowerPhoto-AnnieSpratt.jpg and the S1-L1-VintageImage-austrian-national-library.jpg files (File > Open) from the Class downloads folder.
- Get the Move tool.
- In the Tool Options, Auto Select layer should be unchecked.
- Activate the S1-L1-FlowerPhoto-AnnieSpratt.jpg.
- On the document, hold down the Shift key and click and drag the photo onto the new document.
- If the photo does not fill the page:
 - Click and drag the bounding box handles to the edges of the document.
 - Click the checkmark to commit.
- If the photo is much larger than the page:
 - Press Ctrl 0 (Mac: Cmd 0) to fit the bounding box to the viewing area.
 - Click and drag the bounding box handles to the edge of the document.
 - Click the checkmark to commit.

- Press Ctrl 0 (Mac: Cmd 0) to fit the bounding box to the viewing area.

Note: Starting with a photo on a document puts everyone's pixels per inch at the same starting point.

Note: If you are using something other than a photo, like an element or a background paper, you do not need to resize it.

Add a Vintage Image

- In the Layers panel, click on the photo layer to activate it.
- Get the Move tool.
- Activate the S1-L1-VintageImage-austrian-national-library.jpg.
- Holding down the Shift key, click and drag the image over onto your document, making sure it's above the photo layer.

Blend the Image

- In the Layers panel, with the vintage image layer active, change the Blend Mode to Overlay.
- Lower the Opacity of the vintage image layer to 13%.
- Press Ctrl J (Mac: Cmd J) to create a duplicate of the vintage image.
- Change the Blend Mode of the duplicate vintage image layer to Screen.
- Increase the Opacity of the duplicate vintage image layer to 22%.

Merge the Layers

- In the Layers panel, activate the photo layer.
- Holding down the Shift key, click on the top vintage image layer, so that your photo layer and both vintage image layers are activated.
- Press Ctrl E (Mac: Cmd E) to merge the three layers together.

Save the Document

- Save your document (File > Save As) as a layered PSD file in the class folder for this lesson.
