

## **Printable Grid Web Resources**

Instead of trying to make your own grid, you can find free ready-to-print grid pages from the web. Some of these resources even allow you to set different sizes and dot distance, making it easy to adapt for different paper sizes.

Keep in mind that some of these links may change or become disabled. Remember that I do not own or endorse any of these pages so please use caution when using.

- 1) [Gridzzly.com](http://Gridzzly.com): super easy to use, my favorite. Simply choose the shape, unit and distance of the dots and print. If you use a Mac, *Save as a PDF* first on your computer to make it easier to print and use later.
- 2) [Incompetech.com](http://Incompetech.com): offers many different options and different selections. Careful with the ads and misleading green buttons.
- 3) [Printablepaper.net](http://Printablepaper.net): huge selection of shapes, but doesn't offer option to customize the paper size.
