# Solving Literal Equations and Formulas 1.9 <br> Overview of problems <br> $p$ Example Set: A 

Solve the following equation for the given variable:

1. $F=m a \quad$ solve for $a$
2. $A=l w \quad$ solve for $l$
3. $P=R-C$ solve for $R$
4. $P=2 w+2 l$ solve for $l$
$p$ Example Set: B
Solve the following equation for the given variable:
5. $V=\pi r^{2} h \quad$ solve for $h$
6. $L=a+(n-1) d$ solve for $n$
7. $A=\frac{1}{2} h\left(b_{1}+b_{2}\right) \quad$ solve for $b_{1}$

# Solving Literal Equations and Formulas 1.9 <br> Overview of problems <br> $P$ Example Set: C 

Solve the following equation for the given variable:

1. $S=\frac{r L-a}{r-1} \quad$ solve for $r$
2. $y=m x+b \quad$ solve for $m$

## Example Set: D

1. Given Albert Einstein's famous formula for the Theory of Relativity, rewrite the equation in terms of $m$ and then in terms of $c$.

$$
E=m c^{2}
$$

# Solving Literal Equations and Formulas 1.9 

F Example Set: A -ANSWER KEY
Solve the following equation for the given variable:

1. $F=m a \quad$ solve for $a \quad a=\frac{F}{m}$
2. $A=l w \quad$ solve for $l l=\frac{A}{w}$
3. $P=R-C$ solve for $R \quad R=P+C$
4. $P=2 w+2 l$ solve for $l L=\frac{P-2 w}{2}$

# $F$ Example Set: B- ANSWER KEY 

Solve the following equation for the given variable:

1. $V=\pi r^{2} h \quad$ solve for $h \quad h=\frac{V}{\pi r^{2}}$
2. $L=a+(n-1) d$ solve for $n \quad n=\frac{L-a+d}{d}$
3. $A=\frac{1}{2} h\left(b_{1}+b_{2}\right) \quad$ solve for $b_{1} \quad b_{1}=\frac{2 A-h b_{2}}{h}$

# Solving Literal Equations and Formulas 1.9 

## Example Set: C-ANSWER KEY

Solve the following equation for the given variable:

1. $S=\frac{r L-a}{r-1} \quad$ solve for $r \quad r=\frac{s-a}{s-l}$
2. $y=m x+b \quad$ solve for $m \quad m=\frac{y-b}{x}$

## Example Set: D-ANSWER KEY

1. Given Albert Einstein's famous formula for the Theory of Relativity, rewrite the equation in terms of $m$ and then in terms of $c$.

$$
\begin{gathered}
E=m c^{2} \\
m=\frac{E}{c^{2}} \\
C=\sqrt{\frac{E}{m}}
\end{gathered}
$$
